**Warrior to Dreadnought** David K Brown, 2010-09-22 In the 50 years that separated Warrior from Dreadnought there occurred a revolution in warship design quite unparalleled in naval history a period that began with the fully rigged broadside ironclads and ended with the emergence of the great battleships and battlecruisers that were to fight in the First World War The author explains how nineteenth century designers responded to developments in engine technology armour protection and armament in their attempts to develop the best possible fighting ships He details the development of more efficient engines that brought about the demise of the sailing warship and the competition between armour and armament with every increase in the power of guns stimulating the development of ever more sophisticated methods of protection Importantly he explains that the Victorian Royal Navy far from being the reactionary body it is so often depicted as was in fact at the forefront of technological change for example in the employment of torpedoes and the development of countermeasures to them Full accounts are given of the significant naval events and battles of the period making the book a fine narrative history as well as a brilliant work of warship reference D K BROWN was a distinguished naval architect who retired in 1988 as Deputy Chief Naval Architect of the Royal Corps of Naval Constructors He published widely on the subject of warship design and built a reputation as a clear and brilliant commentator on the development of the ships of the Royal Navy He died in 2008

**Contemporary Ideas on Ship Stability** D. Vassalos, M. Hamamoto, D. Molyneux, A. Papanikolaou, 2000-12-14 Widely publicised disasters serve as a reminder to the maritime profession of the eminent need for enhancing safety cost effectively and as a strong indicator of the existing gaps in the stability safety of ships and ocean vehicles The problem of ship stability is so complex that practically meaningful solutions are feasible only through close international collaboration and concerted efforts by the maritime community deriving from sound scientific approaches Responding to this and building on an established track record of co operative research between UK and Japan a Collaborative Research Project CRP was launched in 1995 This volume includes selected material from the first four workshops 1st in University of Strathclyde July 1995

organized by Professor Vassalos 2nd in Osaka Japan Osaka University November 1996 organized by Professor Masami Hamamoto 3rd in Crete Greece Ship Design Laboratory of the National Technical University of Athens NTUA SDL October 1997 organized by Professor Apostolos Papanikolaou and 4th in Newfoundland Canada Institute for Marine Dynamics September 1998 organized by David Molyneux It contains 46 papers that represent all currently available expertise on ship stability spanning 17 countries from around the world The framework adopted for grouping the papers aims to cover broad areas of ship stability in a way that it provides a template for future volumes
