Feature Interactions in Telecommunications and Software Systems VI Muffy Calder,Evan Magill,2000 Typically telecommunications services are implemented in software Feature interaction is the term used to describe interference between services or features most attention is given to cases where the interference is undesirable ie there is an incompatibility In telecommunications control and data is distributed and on such a large scale that software development is by numerous disjoint teams by its nature therefore this software experienced the feature interaction problem first But while the workshop focuses on communications services the subject has relevance to any domain where separate software entities control a shared resource

Subcommittee on Technology and Innovation,2010 *Mobile Computing* Tomasz Imielinski, Henry F. Korth,2007-08-26 The rapid development of wireless digital communication technology has created capabilities that software systems are only beginning to exploit The falling cost of both communication and of mobile computing devices laptop computers hand held computers etc is making wireless computing affordable not only to business users but also to consumers Mobile computing is not a scaled down version of the established and we studied field of distributed computing The nature of wireless communication media and the mobility of computers combine to create fundamentally new problems in networking operating systems and information systems Further more many of the applications envisioned for mobile computing place novel demands on software systems Although mobile computing is still in its infancy some basic concepts have been identified and several seminal experimental systems developed This book includes a set of contributed papers that describe these concepts and systems Other papers describe applications that are currently being deployed and tested The first chapter offers an introduction to the field of mobile computing a survey of technical issues and a summary of the papers that comprise subsequent chapters We have chosen to reprint several key papers that appeared previously in conference proceedings Many of the papers in this book are being published here for the first time Of these new papers some are expanded versions of papers first presented at the NSF sponsored Mobidata Workshop on Mobile and Wireless Information Systems held at Rutgers University on Oct 31 and Nov 1 1994 *Wireless Mobile Internet Security* Man Young Rhee,2013-03-26 The mobile industry for wireless cellular services has grown at a rapid pace over the past decade Similarly Internet service technology has also made dramatic growth through the World Wide Web with a wire line infrastructure Realization for complete wired wireless mobile Internet technologies will become the future objectives for convergence of

these technologies through multiple enhancements of both cellular mobile systems and Internet interoperability. Flawless integration between these two wired/wireless networks will enable subscribers to not only roam worldwide but also to solve the ever-increasing demand for data Internet services. In order to keep up with this noteworthy growth in the demand for wireless broadband, new technologies and structural architectures are needed to greatly improve system performance and network scalability while significantly reducing the cost of equipment and deployment. Dr. Rhee covers the technological development of wired/wireless Internet communications in compliance with each iterative generation up to 4G systems with emphasis on wireless security aspects. By progressing in a systematic manner presenting the theory and practice of wired/wireless mobile technologies along with various security problems, readers will gain an intimate sense of how mobile Internet systems operate and how to address complex security issues.
