Annotated Timeline of Operations Research Saul I. Gass, Arjang A. Assad, 2007-02-15 An Annotated Timeline of Operations Research An Informal History recounts the evolution of Operations Research OR as a new science the science of decision making Arising from the urgent operational issues of World War II the philosophy and methodology of OR has permeated the resolution of decision problems in business industry and government The Timeline chronicles the history of OR in the form of self contained expository entries Each entry presents a concise explanation of the events and people under discussion and provides key sources where further relevant information can be obtained In addition books and papers that have influenced the development of OR or helped to educate the first generations of OR academics and practitioners are cited throughout the book Starting in 1564 with seminal ideas that form the precursors of OR the Timeline traces the key ideas and events of OR through 2004 The Timeline should interest anyone involved in OR researchers practitioners academics and especially students who wish to learn how OR came into being Further the scope and expository style of the Timeline should make it of value to the general reader interested in the development of science and technology in the last half of the twentieth century **The Theory of Search Games and Rendezvous** Steve Alpern, Shmuel Gal, 2006-04-10

Search Theory is one of the original disciplines within the field of Operations Research It deals with the problem faced by a Searcher who wishes to minimize the time required to find a hidden object or target The Searcher chooses a path in the search space and finds the target when he is sufficiently close to it Traditionally the target is assumed to have no motives of its own regarding when it is found it is simply stationary and hidden according to a known distribution e g oil or its motion is determined stochastically by known rules e g a fox in a forest The problems dealt with in this book assume on the contrary that the target is an independent player of equal status to the Searcher who cares about when he is found We consider two possible motives of the target and divide the book accordingly Book I considers the zero sum game that results when the target here called the Hider does not want to be found Such problems have been called Search Games with the zero sum qualifier understood Book II considers the opposite motive of the target namely that he wants to be found In this case the Searcher and the Hider can be thought of as a team of agents simply called Player I and Player II with identical aims and the coordination problem they jointly face is called the Rendezvous Search Problem *Advanced Distance Sampling* S. T. Buckland, D. R. Anderson, K. P. Burnham, J. L. Laake, D. L. Borchers, L. Thomas, 2004-08-19 This advanced text focuses on the

uses of distance sampling to estimate the density and abundance of biological populations. It addresses new methodologies, new technologies and recent developments in statistical theory and is the follow up companion to *Introduction to Distance Sampling* OUP 2001. In this text a general theoretical basis is established for methods of estimating animal abundance from sightings surveys and a wide range of approaches to analysis of sightings data is explored. These approaches include modelling animal detectability as a function of covariates where the effects of habitat, observer, weather etc on detectability can be assessed; estimating animal density as a function of location allowing for example animal density to be related to habitat and other locational covariates; estimating change over time in populations, a necessary aspect of any monitoring programme; estimation when detection of animals on the line or at the point is uncertain as often occurs for marine populations or when the survey region has dense cover; survey design and automated design algorithms allowing rapid generation of sound survey designs using geographic information systems; adaptive distance sampling methods which concentrate survey effort in areas of high animal density; passive distance sampling methods which extend the application of distance sampling to species that cannot be readily detected in sightings surveys but can be trapped and tested; and testing of methods by simulation so that performance of the approach in varying circumstances can be assessed. Authored by a leading team, this text is aimed at professionals in government and environment agencies, statisticians, biologists, wildlife managers, conservation biologists and ecologists as well as graduate students studying the density and abundance of biological populations. **The**

Theoretical Biologist's Toolbox Marc Mangel, 2006-07-27. Mathematical modelling is widely used in ecology and evolutionary biology and it is a topic that many biologists find difficult to grasp. In this new textbook Marc Mangel provides a no nonsense introduction to the skills needed to understand the principles of theoretical and mathematical biology. Fundamental theories and applications are introduced using numerous examples from current biological research, complete with illustrations to highlight key points. Exercises are also included throughout the text to show how theory can be applied and to test knowledge gained so far. Suitable for advanced undergraduate courses in theoretical and mathematical biology, this book forms an essential resource for anyone wanting to gain an understanding of theoretical ecology and evolution.

Next Generation of Photovoltaics Ana Cristobal, Antonio Martí Vega, Antonio Luque López, 2012-02-14. This book presents new concepts for a next generation of PV. Among these concepts are Multijunction solar cells, multiple excitation solar cells or how to take benefit of high energy photons for the creation of more than one electron hole pair, intermediate band solar cells or how to take advantage of below band gap energy photons and related technologies for quantum dots, nitrides, thin films, advanced light management approaches, plasmonics. Written by world class experts in next generation photovoltaics, this book is an essential reference guide accessible to both beginners and experts working with solar cell technology. The book deeply analyzes the current state of the art of the new photovoltaic approaches and outlines the implementation paths of these advanced devices. Topics addressed range from the fundamentals to the description of state of

Reliability and Statistics in Geotechnical Engineering Gregory B. Baecher, John T. Christian, 2005-08-19 Risk and reliability analysis is an area of growing importance in geotechnical engineering where many variables have to be considered Statistics reliability modeling and engineering judgement are employed together to develop risk and decision analyses for civil engineering systems The resulting engineering models are used to make probabilistic predictions which are applied to geotechnical problems Reliability Statistics in Geotechnical Engineering comprehensively covers the subject of risk and reliability in both practical and research terms Includes extensive use of case studies Presents topics not covered elsewhere spatial variability and stochastic properties of geological materials No comparable texts available Practicing engineers will find this an essential resource as will graduates in geotechnical engineering programmes
