The Theory of Search Games and Rendezvous Steve Alpern, Shmuel Gal, 2006-04-10 Search Theory is one of the original disciplines within the field of Operations Research It deals with the problem faced by a Searcher who wishes to minimize the time required to find a hidden object or target The Searcher chooses a path in the search space and finds the

target when he is sufficiently close to it Traditionally the target is assumed to have no motives of its own regarding when it is found it is simply stationary and hidden according to a known distribution e g oil or its motion is determined stochastically by known rules e g a fox in a forest The problems dealt with in this book assume on the contrary that the target is an independent player of equal status to the Searcher who cares about when he is found We consider two possible motives of the target and divide the book accordingly Book I considers the zero sum game that results when the target here called the Hider does not want to be found Such problems have been called Search Games with the ze sum qualifier understood Book II considers the opposite motive of the target namely that he wants to be found In this case the Searcher and the Hider can be thought of as a team of agents simply called Player I and Player II with identical aims and the coordination problem they jointly face is called the Rendezvous Search Problem
