 including new achievements in theory and technology It serves as an invaluable daily reference for practitioners in the field
 and as a complete organized text on the subject This comprehensive resource covers a wide range of essential topics from
 the classification of radio waves electromagnetic wave theory and antennas for RF radio links to the impact of the earth
 surface on the propagation of ground waves atmospheric effects in radio wave propagation and radio wave reception The
 book explores the propagation of the ground radio waves namely the waves that propagate in vicinity of the earth's surface e
 g guided by that interface without involvement of any atmospheric effects Specifics of the high frequency HF radio
 propagation due to reflections from ionospheric layers is studied based on commonly used models of the ionospheric vertical
 profiles Scattering of the radio waves of UHF and higher frequency bands from the random variations of the tropospheric
 refraction index from tiny air turbulences are also considered by using the principles of statistical radio physics Analysis of
 propagation conditions on real propagation paths including analysis of the power budget of the VHF UHF link to assure its
 stability percentage of availability within observation time frame terrestrial broadcast mobile and satellite RF links are
 presented The engineering design of the cellular networks including LTE 4G 5G and upcoming higher generations is explored
 HF propagation predictions for extremely long range links design for commercial and military applications are explained
