Seaweeds of the Southeastern United States Craig W. Schneider, Richard B. Searles, 1991 The purpose of this book is to provide a manual for the identification of the seaweeds along the southeastern Atlantic coast of the United States It is intended as a field guide and laboratory manual for professional and amateur biologists with an interest in the identification of marine plants The emphasis is on keys descriptions and illustrations Background and practical information are included in the introductory sections

Biodiversity of Seaweeds in the Egyptian Marine Waters Nihal Galal El-Din Thabet Shams El-Din, Sarah Hamdy Rashedy, 2023-08-22 The Arab Republic of Egypt enjoys a vital strategic location Its northern border is the Mediterranean Sea and its eastern border is the Red Sea which give it a special significance from the bio diversity point of view as a coastal zone and as a sensitively diversified ecosystem The shoreline of the Arab Republic of Egypt is about 3 000 km long It is about 1 150 km long on the Mediterranean and about 1 850 km long on the Red Sea which are connected by the Suez Canal which is about 193 30 km in length The three water masses are different ecologically and are experiencing wide range of pressures due to eutrophication coastal development aquaculture and climate change These conditions resulted in several species of seaweeds that adapt to these pressures and expand their living boundaries while others may fade away Accordingly the study of seaweeds biodiversity in the Egyptian marine waters is of great concern globally and constitutes an important element of global change research The present book entitled Biodiversity of Seaweeds in the Egyptian Marine Waters summarizes our current understanding of the biodiversity of seaweeds in the Egyptian marine waters It is a timely publication based wholly on primary data which were collected through extensive field studies conducted over the years covering the marine Egyptian waters and culminate the efforts of the Egyptian phycologists The book contains high quality images of some species in their existing habitats This book gains critical importance from the fact that the Egyptian marine environment is witnessing rapid development which will no doubt have a bearing on the coastal environment and the baseline data on seaweed biodiversity would be useful to understand changes that may arise from physical changes in the environment as also pollution load and climate change

Understanding Marine Biodiversity Committee on Biological Diversity in Marine Systems, Commission on Geosciences, Environment and Resources, Division on Earth and Life Studies, National Research Council, 1995-03-10 The diversity of marine life is being affected dramatically by fishery operations chemical pollution and eutrophication alteration of physical habitat

exotic species invasion and effects of other human activities Effective solutions will require an expanded understanding of the patterns and processes that control the diversity of life in the sea Understanding Marine Biodiversity outlines the current state of our knowledge and propose research agenda on marine biological diversity This agenda represents a fundamental change in studying the ocean emphasizing regional research across a range of space and time scales enhancing the interface between taxonomy and ecology and linking oceanographic and ecological approaches Highlighted with examples and brief case studies this volume illustrates the depth and breadth of undescribed marine biodiversity explores critical environmental issues advocates the use of regionally defined model systems and identifies a series of key biodiversity research questions The authors examine the utility of various research approaches theory and modeling retrospective analysis integration of biotic and oceanographic surveys and review recent advances in molecular genetics instrumentation and sampling techniques applicable to the research agenda Throughout the book the critical role of taxonomy is emphasized Informative to the scientist and accessible to the policymaker Understanding Marine Biodiversity will be of specific interest to marine biologists ecologists oceanographers and research administrators and to government agencies responsible for utilizing managing and protecting the oceans
