Global Seagrass Research Methods F.T. Short, R.G. Coles, 2001-11-06 This thorough and informative volume presents a set of detailed globally applicable techniques for seagrass research The book provides methods for all aspects of seagrass science from basic plant collection to statistical approaches and investigations of plant animal interaction The emphasis is on methods that are applicable in both developing and developed countries The importance of seagrasses in coastal and near shore environments and ultimately their contribution to the productivity of the world's oceans has become increasingly recognised over the last 40 years Seagrasses provide food for sea turtles nearly 100 fish species waterfowl and for the marine mammals the manatee and dugong Seagrasses also support complex food webs by virtue of their physical structure and primary production and are well known for their role as breeding grounds and nurseries for important crustacean finfish and shell fish populations Seagrasses are the basis of an important detrital food chain The plants filter nutrients and contaminants from the water stabilise sediments and act as dampeners to wave action Seagrasses rank with

coral reefs and mangroves as some of the world's most productive coastal habitat and strong linkages among these habitats make the loss of seagrasses a contributing factor in the degradation of the world's oceans Contributors from around the world provide up to date methods for comparable collection of ecological information from both temperate and tropical seagrass ecosystems

A Practical Guide to the Marine Animals of Northeastern North America Leland W. Pollock, 1998 At last a guide to fish as well as invertebrates with profusely illustrated keys and the most recent terminology It is not only practical but authoritative as well A Practical Guide to the Marine Animals of Northeastern North America features Leland Pollock's innovative user friendly keys that circumvent many of the difficulties of traditional identification systems Pollock's keys offer choices among distinctive attributes of the specimen Results are compared to all variations found in the region's fauna using a neatly displayed tabular form accompanied by many line drawings

Reproduction and Development of Marine Invertebrates of the Northern Pacific Coast Megumi F. Strathmann, 2017-09-05 This reference work is designed to provide background information on an array of northeastern Pacific marine invertebrate species so that they can be more easily included in comparative studies of morphology cell biology reproduction embryology larval biology and ecology It is meant to serve biologists who are new to the field as well as experienced investigators who may not be familiar with the invertebrate fauna of the northern Pacific Coast The species discussed in this volume are mostly from the cold temperate waters of the San Juan Archipelago near Puget Sound and the Strait of Georgia but the information and methods given will be useful in laboratories from Alaska to central California and applicable to some extent in other coastal or inland facilities An introductory chapter discusses basic procedures for collecting and maintaining mature specimens for initiating spawning and for culturing embryos and larvae in the laboratory Subsequent chapters summarize reproduction and development in thirty different invertebrate groups and provided recent references through which additional information can be traced cite monographs or keys needed to identify species and give methods useful for studying an array of selected species Available information on habitat diet reproductive mode egg size developmental pattern developmental times larval type and conditions for settlement and metamorphosis is reported for over 450 species

Species Diversity of Animals in Japan Masaharu Motokawa, Hiroshi Kajihara, 2016-11-26 This book summarizes the status quo of the knowledge about the biodiversity in terrestrial freshwater and marine animals that live in Japan Consisting of some 6 800 islands that are arrayed for approximately 3 500 km from north to south the Japanese archipelago has a complex history in a paleogeographic formation process over time and harbors rich flora and fauna This work will contribute to establishing a general biogeographic theory in archipelagoes around continental shelves Facing the ongoing extinction crisis one of the most important tasks for our generation is to bequeath this precious natural heritage to future generations As the first step toward this goal a species list has been compiled through solid steady alpha taxonomic work in each taxon Furthermore the phylogeography and population genetic structure for each species is elucidated for deeper understanding of the local fauna

the scientific results of which should be the basis for establishing conservation policies and strategies Also the problem of alien or introduced species is investigated as another threat to the native fauna Each of the 27 chapters is written by the most active specialist leading the field thus readers can acquire up to date knowledge of the animal species diversity and their formation process of Japanese animals in the most comprehensive form available This book is recommended for researchers and students who are interested in species diversity biogeography and phylogeography
