Shame and Pride Donald L. Nathanson, 1994 This is a revolutionary book about the nature of emotion about the way emotions are triggered in our private moments in our relations with others and by our biology Drawing on every theme of the modern life sciences Dr Nathanson shows how the nine basic affects interest excitement enjoyment joy surprise startle fear terror distress anguish anger rage dissmell disgust and shame humiliation not only determine how we feel but shape our very sense of self For too long there has been a battle between those who explain emotional discomfort on the basis of lived experience and those who blame chemistry As Dr Nathanson shows chemicals and illnesses can affect our mood just as surely as an uncomfortable memory or a stern rebuke He presents a completely new understanding of all emotion providing the first link between the exciting affect theory of Silvan Tomkins and the entire world of biology medicine psychology psychotherapy religion and the social sciences Shame is the least understood of the painful emotions although it affects every phase of life We have all been made to feel foolish just at the moment we most wanted to appear wonderful we have all been rebuffed by those we wished to court Not one of us looks exactly as we might wish Shame haunts our every dream of love and influences how we experience ourselves as sexual beings We react to shame by withdrawing by making painful alliances with those who humiliate us by calling attention to what brings us pride or by attacking whoever has made us feel inferior The comedian as Nathanson shows in his discussion of Buddy Hackett makes us laugh at what we try to keep hidden transforming shame into acceptance and even pride This book explains everything that can possibly make us proud or ashamed All are in this book nobody who reads it will be quite the same again **The Corsini Encyclopedia of Psychology, Volume 4** Irving B. the emergent field of affective neuroscience After a century of the dominance of the verbal left brain it presented a detailed characterization of the early developing right brain and its unique social emotional and survival functions not only in infancy but across all later stages of the human life span It also offered a scientifically testable and clinically relevant model of the development of the human unconscious mind Affect Regulation and the Origin of the Self acts as a keystone and foundation for all of Schore's later writings as every subsequent book article and chapter that followed represented expansions of this seminal work *Paul And The Religious Experience Of Reconciliation* Gilbert I. *Affect Regulation Theory: A Clinical Model (Norton Series on Interpersonal Neurobiology)* Daniel Hill, 2015-08-31. The rich, complex theory of affect regulation boiled down into a clinically useful guide. Affect regulation theory, the science of how humans regulate their emotions, is at the root of all psychotherapies. Drawing on attachment, developmental trauma, implicit processes, and neurobiology, major theorists from Allan Schore to Daniel Stern have argued how and why regulated affect is key to our optimal functioning. This book translates the intricacies of the theory into a cogent clinical synthesis. With clarity and practicality, Hill decodes the massive body of contemporary research on affect regulation, offering a comprehensible and ready-to-implement model for conducting affect regulation therapy. The book is organized around the four domains of a

clinical model 1 a theory of bodymind 2 a theory of optimal development of affect regulation in secure attachment relationships 3 a theory of pathogenesis in which disordered affect regulation originates in relational trauma and insecure attachment relationships and 4 a theory of therapeutic actions targeted to repair the affect regulating systems The key themes of Hill s affect focused approach include how and why different patterns of affect regulation develop how regulatory patterns are transmitted from caretakers to the infants what adaptive and maladaptive regulatory patterns look like neurobiologically psychologically and relationally how deficits in affect regulation manifest as psychiatric symptoms and personality disorders and ultimately the means by which regulatory deficits can be repaired Specific chapters explore such subjects as self states mentalization classical and modern attachment theory relational trauma and its manifestations in chronic dissociation personality disorders and pervasive dissociated shame supporting self development in therapy patient therapist attunement implicit and explicit therapeutic actions and many more
