Shape Of Things A Play:

The Shape of Things Neil LaBute, 2001-11-15 How far would you go for love For art What would you be willing to change Which price might you pay Such are the painful questions explored by Neil Labute in *The Shape of Things* A young student drifts into an ever changing relationship with an art major while his best friends engagement crumbles so unleashing a drama that peels back the skin of two modern day relationships exposing the raw meat and gristle that lie beneath The world premi re of *The Shape of Things* was presented at the Almeida London in May 2001 **The Shape of Things Unseen** Adam

Zeman, 2025-01-16 Fascinating absorbing and educative A C Grayling Highly original and beautifully written Dominic Lawson A compelling insight into how our imagination works based on the latest scientific research People often think of imagination as something used only in creative endeavours In fact we use imagination constantly as we reminisce anticipate plan daydream read create imagined worlds The truth is we live in the here and now much less than we tend to think Imagination isn t the exception in our daily lives it s our default setting Yet only now are we beginning to understand exactly how it works From hallucination to sleepwalking from REM sleep to delusions neurologist Adam Zeman brilliantly guides us through the latest scientific studies in the world of the imagination He draws on research in neuroscience the study of human origins and child development to show how the human brain is above all else a creative imaginative organ and that we have evolved to share what we imagine Our brains behave in strikingly similar ways when we observe remember imagine or act Imagine looking at a cube and your eye will trace the contours of the cube as if you were actually seeing it Yet it turns out that people differ hugely in their imaginative experience Some people lack sensory imagery altogether they would be unable to picture their family if asked to but still lead fulfilling even highly creative lives From how we visualise to how we understand the minds of others from the benefits of play to mental disorders *The Shape of Things Unseen* dazzles and delights It is an essential guide to the latest discoveries about the workings of the human mind **The Shapes of Things** Shawn W.

Walker, 2015-06-25 Many things around us have properties that depend on their shape for example the drag characteristics of a rigid body in a flow This self contained overview of differential geometry explains how to differentiate a function in the calculus sense with respect to a shape variable This approach which is useful for understanding mathematical models containing geometric partial differential equations PDEs allows readers to obtain formulas for geometric quantities such as curvature that are clearer than those usually offered in differential geometry texts Readers will learn how to compute sensitivities with respect to geometry by developing basic calculus tools on surfaces and combining them with the calculus of variations Several applications that utilize shape derivatives and many illustrations that help build intuition are included

The Shape of Space Graham Nerlich, 1994-08-04 This is a revised and updated edition of Graham Nerlich s classic book 1976 It develops a metaphysical account of space that treats it as a real and concrete entity showing that shape plays a key explanatory role in space and spacetime theories Arguing that geometrical explanation is very like causal explanation Professor Nerlich prepares the ground for philosophical argument and investigates how different spaces would affect perception differently Along the way Professor Nerlich criticizes and rejects conventionalism as a non realist metaphysics of space concluding that there is in fact no problem of underdetermination for this aspect of spacetime theories while offering an extensive discussion of the relativity of motion

Neoconstructivism Scott Johnson, 2010 Arguments over the developmental origins of human knowledge are ancient founded in the writings of Plato Aristotle Descartes Hume and Kant They have also persisted long enough to become a core area of inquiry in cognitive and developmental science Empirical contributions to these debates however appeared only in the last century when Jean Piaget offered the first viable theory of knowledge acquisition that centered on the great themes discussed by Kant object space time and causality The essence of Piaget s theory is constructivism The building of concepts from simpler perceptual and cognitive precursors in particular from experience gained through manual behaviors and observation The constructivist view was disputed by a generation of researchers dedicated to the idea of the competent infant endowed with knowledge say of permanent objects that emerged prior to facile manual behaviors Taking this possibility further it has been proposed that many fundamental cognitive mechanisms reasoning event prediction decision making hypothesis testing and deduction operate independently of all experience and are in this sense innate The competent infant view has an intuitive appeal attested to by its widespread popularity and it enjoys a kind of parsimony It avoids the supposed philosophical pitfall posed by having to account for novel forms of knowledge in inductive learners But this view leaves unaddressed a vital challenge to understand the mechanisms by which new knowledge arises This challenge has now been met The neoconstructivist approach is rooted in Piaget s constructivist emphasis on developmental mechanisms yet also reflects modern advances in our understanding of learning mechanisms cortical development and modeling This book brings together for the first time theoretical views that embrace computational models and developmental neurobiology and emphasize the interplay of time experience and cortical architecture to explain emergent knowledge with an empirical line of research identifying a set of general purpose sensory perceptual and learning mechanisms that guide knowledge acquisition across different domains and through development

Reflecting 9/11 Heather Pope,Victoria Bryan,2016-06-22 In over fifteen years the cultural and artistic response to 9 11 has been wide ranging in form and function As the turbulent post 9 11 years have unfolded years that have been shaped and characterized by the War on Terror the Patriot Act the Wars in Afghanistan and Iraq 7 7 Abu Ghraib and Guant namo Bay these texts have been commemorative and heroic have attempted to work through collective and individual traumas and have struggled with trying to represent the terrorist other Many of these earlier domestic heroic and traumatic works have so often been read as limitations in narrative This collection however challenges the language of limitation and provides re readings of earlier work but also traces the emergence of a new paradigm for discussing the artistic responses to 9 11 one that frames these narratives as dialogic self conscious and self reflexive interventions in the responses to the attacks the initial representations of the attacks and the ever shifting social and geopolitical continuities of the 9 11 decade These texts widen the conversation about the lasting impacts of 9 11 and incorporate strands of discussion on American exceptionalism and imperialism torture and otherness whilst still remaining invested in the personal and collective traumas of the attacks

The authors included here ask crucial questions about the way 9 11 is being historicized will it for example be read as a moment of rupture or epoch Will it inevitably be attached to the War on Terror or the Wars in Iraq and Afghanistan As they trace the emergent patterns of reflexivity politicization and dissent the contributions here are also implicitly invested in asking how far they extend

The Fragility of Things William E. Connolly,2013-09-02 In *The Fragility of Things* eminent theorist William E Connolly focuses on several self organizing ecologies that help to constitute our world These interacting geological biological and climate systems some of which harbor creative capacities are depreciated by that brand of neoliberalism that confines self organization to economic markets and equates the latter with impersonal rationality Neoliberal practice thus fails to address the fragilities it exacerbates Engaging a diverse range of thinkers from Friedrich Hayek Michel Foucault Hesiod and Immanuel Kant to Voltaire Terrence Deacon Friedrich Nietzsche and Alfred North Whitehead Connolly brings the sense of fragility alive as he rethinks the idea of freedom Urging the Left not to abandon the state but to reclaim it he also explores scales of politics below and beyond the state The contemporary response to fragility requires a militant pluralist assemblage composed of those sharing affinities of spirituality across differences of creed class gender sexual orientation and ethnicity
