Machine That Sees Like Us Zygmunt Pizlo,Yunfeng Li,Tadamasa Sawada,Robert M. Steinman,2014-04-09 Making a Machine That Sees Like Us explains why and how our visual perceptions can provide us with an accurate representation of the external world Along the way it tells the story of a machine a computational model built by the authors that solves the computationally difficult problem of seeing the way humans do This accomplishment required a radical paradigm shift one

that challenged preconceptions about visual perception and tested the limits of human behavior modeling for practical application. The text balances scientific sophistication and compelling storytelling making it accessible to both technical and general readers. Online demonstrations and references to the authors previously published papers detail how the machine was developed and what drove the ideas needed to make it work. The authors contextualize their new theory of shape perception by highlighting criticisms and opposing theories offering readers a fascinating account not only of their revolutionary results but of the scientific process that guided the way.

Evaluation of the Achievement Levels for Mathematics and Reading on the National Assessment of Educational Progress National Academies of Sciences, Engineering, and Medicine, Division of Behavioral and Social Sciences and Education, Board on Testing and Assessment, Committee on National Statistics, Committee on the Evaluation of NAEP Achievement Levels for Mathematics and Reading, 2017-04-12

Since 1969 the National Assessment of Educational Progress NAEP has been providing policymakers educators and the public with reports on academic performance and progress of the nation's students. The assessment is given periodically in a variety of subjects: mathematics, reading, writing, science, the arts, civics, economics, geography, U.S. history, and technology and engineering literacy. NAEP is given to representative samples of students across the U.S. to assess the educational progress of the nation as a whole. Since 1992 NAEP results have been reported in relation to three achievement levels: basic, proficient, and advanced. However, the use of achievement levels has provoked controversy and disagreement and evaluators have identified numerous concerns. This publication evaluates the NAEP student achievement levels in reading and mathematics in grades 4, 8, and 12 to determine whether the achievement levels are reasonable, reliable, valid, and informative to the public and recommends ways that the setting and use of achievement levels can be improved.
