

Shaping culture in the hybrid environment

What is culture?

The roots are hidden beneath the ground and seemingly unseen, however, the health of the root system determines the health of the tree.

Highly engaged workers score their organisation significantly higher than low engagement workers on the seven components of culture

Making Nature, Shaping Culture, 1995-01-01 For ages farmers have domesticated plant varieties while scientists have made nature through hybridization and other processes This give and take mediated through negotiations persuasion the marketplace and even coercion has resulted in what we call nature and has led to a homogenization of plant crops Yet homogenization has led to new problems genetic vulnerability and the lack of systems to maintain plant germplasm of varieties no longer grown in the fields This book addresses issues previously viewed as primarily technical concerning the germplasm debate that is how what and where to store the range of genetic materials necessary to reproduce plants By examining Brazil Chile France and the United States the authors show how different cultures respond to the decline in genetic diversity The findings show that the quest for uniformity in foods agriculture and environment eventually threatens everyone The politicization of this debate is inevitable because the destruction of human cultural diversity goes hand in hand with the destruction of plant varietal diversity The authors agree that responses to the controversies must involve food security relinking of food with agriculture and the environment revaluing traditional knowledge and rethinking development They stress that answers will be found not by experts acting unilaterally but through the democratization of scientific and technical exchange Lawrence Busch is professor of sociology at Michigan State University William B Lacy is director of the Cooperative Extension Service at Cornell University Jeffrey Burkhardt is a professor of agricultural economics at the Institute for Food and Agricultural Sciences at the University of Florida Douglas

Rethinking Culture David White, 2017-03-31 Organizational or corporate culture is the most overused and least understood word in business if not society While the topic has been an object of keen academic interest for nearly half a century theorists and practitioners still struggle with the most basic questions What is organizational culture Can it be measured Is it a dependent or independent variable Is it causal in organizational performance and if so how Paradoxically managers and practitioners ascribe cultural explanations for much of what constitutes organizational behavior in organizations and moreover believe culture can be engineered to their own designs for positive business outcomes What explains this divide between research and practice While much academic research on culture is challenged by ontological epistemic and ethical difficulties there is little empirical evidence to show culture can be deliberately shaped beyond espoused values The gap between research and practice can be explained by one simple reason the science and practice of culture has yet to catch up to managerial intuition Managers are correct in suspecting culture is a powerful normative force but until now current theory and research is not able to adequately account for cultural behavior in organizations *Rethinking Culture* describes and presents evidence for a new framework of organizational culture based on the cognitive science of the so called cultural mind It will be of relevance to academics and researchers with an interest in business and management organizational culture and organizational change as well as cognitive and cultural anthropologists and sociologists interested in applications of theory in organizational and

institutional settings

Perspectives on Leadership Gilbert W. Fairholm, 2000-08-30 In tracing the intellectual roots of business leadership over the last one hundred years award winning author Gilbert W Fairholm argues that until recently spirit and soul have been absent from the major models After outlining the elements of the five major ideas about leadership he goes on to define and make operational a new focus that must exist in order to truly understand the leader's role in relation to workers The study begins with scientific management and traces the evolution of leadership ideas through the quality movement on to values culture and trust based leadership models and concluding with an emphasis on spirit in the workplace It suggests that the leader in the twenty first century will need to embrace a leadership style based on the main premise of each model along with a focus on ethics community service and spirituality
