ABSTRACT

Digital learning technologies have increasingly emerged as critical tools in informing education policy, particularly in fostering equity in education for countries with under-resourced regions. This study explores how national education policies are influenced in integrating technology as a catalyst in bridging the educational divide and improving access to quality learning in an equitable manner. The quantitative survey method was used whereby the study covered 1,200 policymakers and educators from 15 countries in the Global South. Participants were selected based on involvement in the development of education policy or the implementation of digital learning in their communities. Responses were obtained through a structured questionnaire with respect to their perceptions about the implications of technology-driven policies for educational equity. Results indicated that 85% of the participants perceive that, with the advent of digital learning platforms, the access to education in distant and rural areas has increased phenomenally. Further, 78% of the participants believed that digital tools have helped in reducing the gap in educational outcomes between an urban and rural setup. In countries with strong policies related to digital education, a resultant increase of 25% in enrollment was observed in marginalized groups within two years of the adoption of that policy. Seventy percent of the respondents also claimed that digital education has revolutionized learning outcomes, allowing students with disabilities to be included more within mainstream education systems. The study concluded by establishing that technology plays an important role in shaping the equitable national policies of education. It is recommended that policymakers should focus on strengthening the infrastructure of digitals, training teachers, and providing resources to ensure inclusive education for all. Future research should now investigate the impact of digital learning policies on educational equity in the long term, and their potential for scalability across different national contexts.
