Shaping Losses:

Shaping Losses Julia Epstein, Lori Hope Lefkowitz, 2001 *Shaping Losses* explores how traumatic loss affects identity and how those who are shaped by loss give shape in turn to the empty place where something relationships family culture was and is no longer Taking the example of the decimation of European Jewry during the Nazi era *Shaping Losses* confronts the problem of transforming trauma into cultural memory This eloquent volume examines how memoirs films photographs art and literature as well as family conversations and personal remembrances embody the impulse to preserve what is destroyed The contributors all distinguished women scholars most of them survivors or daughters of survivors examine classic memorializations such as Claude Lanzmann's film *Shoah* and Roman Vishniac's photographs of prewar Jews as well as several less well known works They also address ways in which children of survivors of the Holocaust and of other catastrophic traumas struggle with inherited or vicarious memory striving to come to terms with losses that centrally define them although they experience them only indirectly *Shaping Losses* considers the limitations of Holocaust representations and testimonies that capture shards of the experience but are necessarily selective and reductive Contributors discuss artistic efforts to preserve the rawness of memory to resist redemptive closure in Holocaust narratives and public memorials and to prevent the Holocaust from being sealed in the cold storage of history The authors probe the nature of memory and of trauma studying the use of language within and outside a traumatic context such as Auschwitz and pinpointing the qualities that make traumatic memory ineffable untransmittable and perhaps unreliable Within the haunted terrain of traumatized memory that all Holocaust testimonies inhabit the impulse to give form to emptiness to shape loss emerges as a necessary betrayal a vital effort to bridge the gap between history and memory

Channel Modeling and Physical Layer Optimization in Copper Line Networks Rainer Strobel,2018-06-20 This book investigates the physical layer aspects of high speed transmission on twisted pair copper wires where the most performance critical components are multi input multi output MIMO precoding and multi line spectrum optimization as well as optimized scheduling of the transmission time slots on the fiber to the distribution point FTTdp copper link The book brings theoretical results into the implementation which requires the introduction of realistic channel models and more practical implementation constraints as

found in the copper access network A good understanding of the transmission medium twisted pair telephone cable bundles is the basis for this work Starting from the analysis of measurement data from twisted pair cable bundles at high frequencies it presents a MIMO channel model for the FTTdp network which allows the characteristic effects of high frequency transmission on copper cable bundles in simulation to be reproduced and the physical layer transmission methods on the copper channels to be analyzed and optimize The book also presents precoding optimization for more general power constraints and implementation constraints The maximization of data rate in a transmission system such as G fast or VDSL is a combinatorial problem as the rate is a discrete function of the number of modulated bits Applying convex optimization methods to the problem offers an efficient and effective solution approach that is proven to operate close to the capacity of the FTTdp channel In addition to higher data rates low power consumption is another important aspect of the FTTdp network as it requires many access nodes that are supplied with power from the subscriber side over the twisted pair copper wires Discontinuous operation is a method of quickly adding and removing lines from the precoding group To implement this the system switches between different link configurations over time at a high frequency The transmission times of all lines are jointly optimized with respect to the current rate requirements Discontinuous operation is used to save power but also makes it possible to further increase the data rates taking the current subscriber traffic requirements into account These methods are compared with theoretical upper bounds using realistic channel models and conditions of a system implementation The performance analysis provides deeper insights into implementation complexity trade offs and the resulting gap to channel capacity

Performing Memories Gabriele Biotti,2021-04-26 What is memory today How can it be approached Why does the contemporary world seem to be more and more haunted by different types of memories still asking for elaboration Which artistic experiences have explored and defined memory in meaningful ways How do technologies and the media have changed it These are just some of the questions developed in this collection of essays analysing memory and memory shapes which explores the different ways in which past time and its elaboration have been and still are elaborated discussed written or filmed and contested but also shared By gathering together scholars from different fields of investigation this book explores the cultural social and artistic

tensions in representing the past and the present in understanding our legacies and in approaching historical time and experience Through the analysis of different representations of memory and the investigation of literature anthropology myth and storytelling a space of theories and discourses about the symbolic and cultural spaces of memory representation is developed *Lattice Coding for Signals and Networks* Ram Zamir,2014-08-07 Links information theory and digital communication through the language of lattice codes featuring many advanced practical setups and techniques *Study of Variables in Moisture Loss Testing of Membrane-forming Curing Compounds* ,1956 **The Public Life of Privacy in Nineteenth-Century American Literature** Stacey Margolis,2005-05-13 Challenges the familiar way of reading a major strain of 19th century American literature Rather than seeing this strain as preoccupied with a subject s inner mental life it shows that subjects can only be understood and understand themselves through
