competence which was presented to the APFIC as an information paper in 2016 FAO 2016a The 2015 study used a mixture of media reports literature review and interviews to build a picture of hotspots of illegal fishing across the APFIC area of competence This report builds on the previous work incorporating additional analysis methods to predict illegal fishing in a transparent manner Based on discussions with the APFIC Secretariat it was decided to limit the study to the illegal component of IUU fishing A key difference with the 2015 study is the extension of the estimation of illegal fishing from the 33 hotspots covered in the 2015 study to the entire APFIC area of competence in this study This report provides the following key outputs i development and implementation of an agreed methodology for estimating illegal fishing levels and progress ii information from case studies in three Asia Pacific countries and iii analysis of results from the agreed method estimating the incidence of illegal fishing and implication of efforts to reduce it The approach taken to achieve these goals included a structured online survey of fisheries officials in APFIC countries semi structured interviews of key informants knowledgeable about illegal fishing in the APFIC region and analysis of articles on illegal fishing from public media data across the APFIC area of competence Precalculus with Trigonometry Paul A.
