B-29 Superfortress Graham M. Simons,2012-09-19 A well written history of a history changing aircraft the bomber that carried the two atomic bombs that destroyed Hiroshima and Nagasaki in WWII Aeromilitaria The Boeing B 29 Superfortress was a four engined heavy bomber flown primarily by the United States in World War Two and the Korean War The name Superfortress was derived from that of its well known predecessor the B 17 Flying Fortress The B 29 was the progenitor of a series of Boeing built bombers reconnaissance aircraft trainers and tankers including the variant B 50 Superfortress The B 29 was one of the largest aircraft to see service during World War Two A very advanced bomber for its time it included features such as pressurized cabins an electronic fire control system and remote controlled machine gun turrets Though it was designed as a high altitude daytime bomber in practice it actually flew more low altitude nighttime incendiary bombing missions It was the primary aircraft in the American firebombing campaign against Japan in the final months of World War Two Unlike many other World War Two era bombers the B 29 remained in service long after the war ended with a few even being employed as flying television transmitters The type was finally retired in the early 1960s with 3 960 aircraft in all built Without doubt there is a clear strong requirement to put the record straight using primary source documentation to record the undoubted achievements alongside and in context with the shortcomings to the type s design and operation that have otherwise received scant attention The book covers all variants and is profusely illustrated **Pioneering Progress** William B. Bonvillian,2024-10-29 An expert exploration of the foundations of America s science and technology policies and the dynamics of its innovation system Why study science and technology policy What role does innovation play and how do we foster it Economics tells us technological innovation drives economic growth and societal well being but technology is always a double edged sword great technological advances offer both opportunities and threats In Pioneering Progress William Bonvillian explains the complex science and technology innovation system and discusses the challenges of emerging industrial policies Drawing on in depth case studies on critical areas such as energy computing advanced manufacturing and health with an emphasis on the needed public policy and the federal government R D role in those systems Bonvillian reviews the foundations of economic growth theory innovation systems theory and innovation organization theory Bonvillian a highly

respected expert who has worked as a deputy assistant secretary of transportation in the federal government and a senior advisor in Congress reviews a new theory of direct and indirect economic factors in the innovation system He describes the innovation based competitive and advanced manufacturing challenges now facing the US economy reviews comparative efforts in other nations studies the varied models for how federal science and technology mission agencies are organized and explores the growth of public private partnership and industrial policy models as a way for science mission agencies to pursue mission agendas Pioneering Progress places particular emphasis on the organization and role of medical science and energy innovation agencies and how we can address the gaps in the health energy and advanced production innovation economic models

First Strike! Robert C. Aldridge, 1983 A former design engineer for Lockheed presents a comprehensive survey of U S and Soviet nuclear forces and strategic doctrines that exposes the U S military's dangerous bid for first strike capability and describes corporate imperatives for perpetuating the arms race and circumventing arms control

NRL Report, 1979 *Technical Publications for Air Force Technical Libraries*, 1948 **Electronics In The Evolution Of Flight** Albert D. Helfrick, 2004 Electronics in the Evolution of Flight traces the paired history of modern aviation and electronics through their births in the minds of early thinkers and dreamers such as the Wright Brothers and Alexander Graham Bell to their eventual marriage under the name avionics Author Albert Helfrick provides a thorough account of the roles played by the famous and the obscure from Edwin Howard Armstrong to Nikola Tesla and David Sarnoff in the successful creation of aviation technology Helfrick does not limit his discussion to the flying machines themselves but instead focuses much of his work on the advancement of electronic systems that have kept them in the air and turned aviation into the industry it is today He gives a clear explanation of technical definitions and acronyms including Radio Detection and Ranging RADAR the Instrument Landing System ILS the difference between short waves and microwaves as well as the role of amateur short wave radio operators in proving the usefulness of amazingly short radio waves in communication With an easy familiarity he reviews topics as varied as the Morse code the Radio Club of America and the evolution of microprocessors Helfrick covers the history of all of the engineering and electronic developments involved in getting an airplane off the ground and keeping it in the air he does so in a style that will satisfy the curiosity of every reader from engineer to layman *Journal*, 1949 *A Century of Electrical Engineering and Computer Science at MIT, 1882-1982* Karl L. Wildes, Nilo A. Lindgren, 1985 The book's text and many photographs introduce readers to the renowned teachers and researchers who are still well known in engineering circles Electrical engineering is a protean profession Today the field embraces many disciplines that seem far removed from its roots in the telegraph telephone electric lamps motors and generators To a remarkable extent this chronicle of change and growth at a single institution is a capsule history of the discipline and profession of electrical engineering as it developed worldwide Even when MIT was not leading the way the department was usually quick to adapt to changing needs goals curricula and research programs What has remained

constant throughout is the dynamic interaction of teaching and research flexibility of administration the interconnections with industrial progress and national priorities The book s text and many photographs introduce readers to the renowned teachers and researchers who are still well known in engineering circles among them Vannevar Bush Harold Hazen Edward Bowles Gordon Brown Harold Edgerton Ernst Guillemin Arthur von Hippel and Jay Forrester The book covers the department s major areas of activity electrical power systems servomechanisms circuit theory communications theory radar and microwaves developed first at the famed Radiation Laboratory during World War II insulation and dielectrics electronics acoustics and computation This rich history of accomplishments shows moreover that years before Computer Science was added to the department s name such pioneering results in computation and control as Vannevar Bush s Differential Analyzer early cybernetic devices and numerically controlled servomechanisms the Whirlwind computer and the evolution of time sharing computation had already been achieved
