## **Networks Of Power Electrification In Western Society 1880 193:**

**Networks of Power** Thomas Parke Hughes, 1993-03 Awarded the Dexter Prize by the Society for the History of Technology this book offers a comparative history of the evolution of modern electric power systems It described large scale technological change and demonstrates that technology cannot be understood unless placed in a cultural context

Networks of Power Thomas P. Hughes, 1983      **A Nation Transformed by Information** Alfred D. Chandler Jr., James W. Cortada, 2000-08-10 This book makes the startling case that North Americans were getting on the information highway as early as the 1700 s and have been using it as a critical building block of their social economic and political world ever since By the time of the founding of the United States there was a postal system and roads for the distribution of mail copyright laws to protect intellectual property and newspapers books and broadsides to bring information to a populace that was building a nation on the basis of an informed electorate In the 19th century Americans developed the telegraph telephone and motion pictures inventions that further expanded the reach of information In the 20th century they added television computers and the Internet ultimately connecting themselves to a whole world of information From the beginning North Americans were willing to invest in the infrastructure to make such connectivity possible This book explores what the deployment of these technologies says about American society The editors assembled a group of contributors who are experts in their particular fields and worked with them to create a book that is fully integrated and cross referenced      **A Culture of Improvement** Robert Friedel, 2010-02-26 How technological change in the West has been driven by the pursuit of improvement a history of technology from plows and printing presses to penicillin the atomic bomb and the computer Why does technology change over time how does it change and what difference does it make In this sweeping ambitious look at a thousand years of Western experience Robert Friedel argues that technological change comes largely through the pursuit of improvement the deep rooted belief that things could be done in a better way What Friedel calls the culture of improvement is manifested every day in the ways people carry out their tasks in life from tilling fields and raising children to waging war Improvements can be ephemeral or lasting and one person s improvement may not always be viewed as such by others Friedel stresses the social processes by which we define what improvements are and decide which improvements will last and which will not These processes he emphasizes have created both winners and losers in history Friedel presents a series of narratives of Western technology that begin in the eleventh century and stretch into the twenty first Familiar figures from the history of invention are joined by others the Italian preacher who described the first eyeglasses the dairywomen displaced from their control over cheesemaking and the little known engineer who first suggested a grand tower to Gustav Eiffel Friedel traces technology from the plow and the printing press to the internal combustion engine the transistor and the space shuttle Friedel also reminds us that faith in improvement can sometimes have horrific consequences as improved weaponry makes warfare ever more deadly and the drive for improving human beings can lead to eugenics and even

genocide The most comprehensive attempt to tell the story of Western technology in many years engagingly written and lavishly illustrated A Culture of Improvement documents the ways in which the drive for improvement has shaped our modern world

Beyond the Networked City Olivier Coutard,Jonathan Rutherford,2015-12-14 Cities around the world are undergoing profound changes In this global era we live in a world of rising knowledge economies digital technologies and awareness of environmental issues The so called modern infrastructural ideal of spatially and socially ubiquitous centrally governed infrastructures providing exclusive homogeneous services over extensive areas has been the standard of reference for the provision of basic essential services such as water and energy supply This book argues that after decades of undisputed domination this ideal is being increasingly questioned and that the network ideology that supports it may be waning In order to begin exploring the highly diverse fluid and unstable landscapes emerging beyond the networked city this book identifies dynamics through which a break with previous configurations has been operated and new brittle zones of socio technical controversy through which urban infrastructure and its wider meaning are being negotiated and fought over It uncovers across a diverse set of urban contexts new ways in which processes of urbanization and infrastructure production are being combined with crucial sociopolitical implications through shifting political economies of infrastructure which rework resource distribution and value creation through new infrastructural spaces and territorialities which rebundle socio technical systems for particular interests and claims and through changing offsets between individual and collective appropriation experience and mobilization of infrastructure With contributions from leading authorities in the field and drawing on theoretical advances and original empirical material this book is a major contribution to an ongoing infrastructural turn in urban studies and will be of interest to all those concerned by the diverse forms and contested outcomes of contemporary urban change across North and South

**Crisis of the Wasteful Nation** Ian Tyrrell,2015-01-19 Long before people were going green and toting reusable bags the Progressive generation of the early 1900s was calling for the conservation of resources sustainable foresting practices and restrictions on hunting Industrial commodities such as wood water soil coal and oil as well as improvements in human health and the protection of nature in an aesthetic sense were collectively seen for the first time as central to the country s economic well being moral integrity and international power One of the key drivers in the rise of the conservation movement was Theodore Roosevelt who even as he slaughtered animals as a hunter fought to protect the country s natural resources In Crisis of the Wasteful Nation Ian Tyrrell gives us a cohesive picture of Roosevelt s engagement with the natural world along with a compelling portrait of how Americans used wasted and worried about natural resources in a time of burgeoning empire Countering traditional narratives that cast conservation as a purely domestic issue Tyrrell shows that the movement had global significance playing a key role in domestic security and in defining American interests around the world Tyrrell goes beyond Roosevelt to encompass other conservation advocates and policy makers particularly those engaged with shaping the nation s economic and social policies policies built

on an understanding of the importance of crucial natural resources Crisis of the Wasteful Nation is a sweeping transnational work that blends environmental economic and imperial history into a cohesive tale of America's fraught relationships with raw materials other countries and the animal kingdom

**Sustainable Urban Energy Policy** David Hawkey, Janette Webb, Heather Lovell, David McCrone, Margaret Tingey, Mark Winskel, 2015-12-14 Minimising the most severe risks of climate change means ending societal dependence on fossil fuels and radically improving the efficiency with which we use all energy sources Such deliberate transformative change is however without precedent Sustainable Urban Energy Policy debates the major public issue of developing a sustainable clean and affordable energy system by adopting a distinctive focus on heating in cities In this way the book constructs an original account of clean energy policy politics and provision grounded in new empirical data derived from case studies of urban and multi level governance of sustainable heat and energy saving in the UK and Europe Offering an original conceptual framework this study builds on socio technical studies economic and urban sociology human geography applied economics and policy studies in order to understand energy governance and systemic change in energy provisions This book is a valuable resource for students and academics in the areas of Science and Technology Studies Sociology Geography Urban Studies and Political Economy as well as energy policy makers social housing providers and energy practitioners

**The Rise of the New Network Industries** Juan Montero, Matthias Finger, 2021-05-04 Cutting through the confusion around the nature and implications of digitalization this book explores the rise of the new digital networks how they affect traditional infrastructure and how they will eventually need to be regulated The authors examine how digitalization affects infrastructures in telecommunications transport and energy and how digital platforms establish themselves as a new network on top of and in addition to traditional ones Complex concepts are introduced through short and colorful stories about the founders of the most popular platforms Google Facebook Skype Uber etc and how they grew to positions of power drawing parallels with century old traditional network industries monopoly power AT T General Electric etc The authors argue that these digital platforms strongly interfere with traditional infrastructures that are heavily regulated and provide essential services for society meaning that digital platforms should be considered as a new and much more powerful type of infrastructure and will require regulation accordingly A global audience of policy makers public authorities consultants lawyers students and academics as well as anyone with an interest in these digital platforms will find this book enlightening and essential reading

*Cultures of Prediction in Atmospheric and Climate Science* Matthias Heymann, Gabriele Gramelsberger, Martin Mahony, 2017-06-26 In recent decades science has experienced a revolutionary shift The development and extensive application of computer modelling and simulation has transformed the knowledge making practices of scientific fields as diverse as astrophysics genetics robotics and demography This epistemic transformation has brought with it a simultaneous heightening of political relevance and a renewal of international policy agendas raising crucial questions about the nature and application of simulation knowledges throughout

public policy Through a diverse range of case studies spanning over a century of theoretical and practical developments in the atmospheric and environmental sciences this book argues that computer modelling and simulation have substantially changed scientific and cultural practices and shaped the emergence of novel cultures of prediction Making an innovative interdisciplinary contribution to understanding the impact of computer modelling on research practice institutional configurations and broader cultures this volume will be essential reading for anyone interested in the past present and future of climate change and the environmental sciences

**Infrastructural Times** Jean-Paul D. Addie, Michael R. Glass, Jen Nelles, 2025-04-15 Whether waiting for the train or planning the future city infrastructure orders and depends on multiple urban temporalities This agenda setting volume disrupts conventional notions of time through a robust examination of the relations between temporality infrastructure and urban society Conceptually rich and empirically detailed its interdisciplinary dialogue encompasses infrastructural systems including transportation energy and water to bridge often siloed technical political economic and lived perspectives With global coverage of diverse cities and regions from Berlin to Jayapura this book is an essential provocation to re evaluate urban theory politics and practice and better account for the temporal complexities that shape our infrastructured worlds
