Community series in inflammation in respiratory and neurological diseases and the immune-interaction of the lung-brain axis, volume II Jialin C. Zheng, Ping Yuan, Xiaohuan Xia, Wen-Hui Wu, Danchen Wu, Yi Yan, 2025-07-31 This Research Topic is the second volume of the Inflammation in Respiratory and Neurological Diseases and the immune interaction of the lung brain axis Community Series Please see volume I here Despite great advances in diagnosis and treatment that we have witnessed in the last decades over a billion people suffer from both respiratory and neurological diseases each year which poses great threats to public health and economic burden worldwide In many instances the underlying pathogenic mechanisms are still poorly understood which significantly limits the efficacy of therapeutic methods In this regard lines of evidence pinpoint the important role of immunity and inflammation in both respiratory disorders e g pulmonary hypertension chronic obstructive pulmonary disease asthma etc and neurological ones e g neurodegenerative diseases stroke depression etc The accumulation of inflammatory cells and an excess of cytokines and chemokines at the inflammatory site would result from the disturbance of the body's delicate balance between immunity and tolerance Therefore it gives rise to chronic inflammation and autoimmunity underlying the development of both lung and neurological diseases Furthermore the

inflammation interaction between lung and brain has been identified suggesting the existence and importance of the lung brain axis in the regulation of immune responses in the lung and brain that contribute to the onset and progression of both respiratory and neurological diseases Nevertheless inflammatory or immunity related risk factors as well as novel targets and therapies against inflammation or immunity help early diagnosis and treatment of respiratory and neurological diseases At present the full picture of the molecular mechanisms of how immuno inflammatory activation and the immune cells orchestrate the tissue remodeling leading to respiratory and neurological diseases remains unclear The identification of inflammatory molecules as therapeutic targets or biomarkers are worth further scrutiny to halt the disease progression and monitor the therapeutic interventions The goal of this Research Topic is to provide an overview of the immunomodulatory mechanisms novel targets and therapies against the inflammatory mediators the inflammatory interaction between lung and brain as well as inflammation related risk factors in respiratory and neurological diseases It will enhance our comprehension of immunity as a crucial player in the crosstalk between the lung and brain under physiological and pathological conditions We welcome the submission of Review Original Research articles and Clinical Trial data that cover but are not limited to the following topics 1 Immunity and inflammation related mechanisms in respiratory and neurological diseases 2 Novel targets against inflammation or immunity in respiratory and neurological diseases 3 Novel therapies e g exosomes engineered immunomodulatory agents nanomaterials against inflammation or immunity in respiratory and neurological disorders 4 The inflammatory interactions of lung and brain under physiological and pathological conditions 5 The identification of inflammation or immunity related risk factors traditional and genetic contributing to respiratory and neurological diseases for the development of novel biomarkers for disease diagnosis and prognosis

Neuro-inflammation in Neuronal Death and Repair

Stuart Lipton, M. Tiziana Corasaniti, 2007-07-25 Neuroinflammation has been implicated recently in the pathogenesis of many neurodegenerative diseases The cross talk between neurons and non neuronal cells seems to be a critical step in the progression of neurodegeneration and molecules that have a beneficial role may turn into harmful players Thus matrix metalloproteinases MMPs which are involved in axonal growth and regeneration as well as synaptic plasticity may also have detrimental effects Recent evidence has linked MMPs to conditions like ischemia multiple sclerosis Alzheimer s disease and suggested that together with their role in the degradation of extracellular macromolecules MMPs could work as important signalling molecules from injured neurons to the microglia Thus MMP 3 has been shown to induce the release of pro inflammatory cytokines from microglia via activation of ERK and NF kB dependent pathways Increasing evidence highlights the importance of a balanced cross talk between neurons and non neuronal cells and indicates that the presence of reactive astrocytes the activation of microglia and the release of inflammatory mediators may contribute to the progression of many central nervous system disorders independently of the nature of the primary pathogenic event However many aspects still remain controversial and much more effort is needed to understand the role of neuroinflammatory mediators and

processes in these conditions This volume brings together renowned international scientists to discuss current knowledge and views on the mechanisms of neuroinflammation on its role in the context of different neurodegenerative diseases i e Alzheimer s prion disease HIV associated dementia multiple sclerosis pain and on the potential approaches for future therapeutic strategies
