Pathophysiology And Clinical Applications Of Nitric Oxide

Robert D. Odze, John R. Goldblum

Pathophysiology And Clinical Applications Of Nitric Oxide:

Pathophysiology and Clinical Applications of Nitric Oxide Gabor M. Rubanyi, 1999-06-23 Research on the key mediator nitric oxide has increased exponentially over the last ten years. It is now clear that in addition to its role within the cardiovascular system, this mediator is also implicated in the normal physiological function and disease pathology of several organs and systems. A number of the fundamental research observations are *Pathophysiology and clinical applications of nitric oxide*. A Gabor M. Rubanyi, 1999 *Nitric Oxide in Pulmonary Processes* Maria G. Belvisi, Jane A. Mitchell, 2012-12-06 Nitric oxide is an endogenously produced gas with a wide range of biological effects and has been implicated in many physiological and pathophysiological processes. It is released by many cell types in various organs but is particularly important in the maintenance of normal lung function. Nitric oxide in exhaled breath has been identified as a marker for lung disease in some patients. Thus it is appropriate to consider the lung separately for the role and functioning of nitric oxide. The authors identify key areas in the history, biochemistry, physiology, pathophysiology, immunology, and clinical applications of nitric oxide in the lung. The contents of this book will be of particular importance to scientists and clinicians with an interest in lung disease. Moreover, the authors encompass state-of-the-art opinions and rational for the therapeutic potential of nitric oxide and its inhibitors. *Ischemic Blood Flow in the Brain* Y. Fukuuchi, M. Tomita, A. Koto, 2000-11-01 Because stroke is essentially a disease of the vessels and blood flow, the most fundamental aspects of ischemic blood flow in the brain are under investigation by researchers. Their work was the focus of the sixth in the series of Keio University International Symposia for Life Sciences and Medicine held in Tokyo in 1999. Selected here are 55 papers from the symposium covering the buffy coat, glycocalyx of endothelial cells, the blood-brain barrier, and permeability, gene expression, vascular reactivity, dysregulation, inflammatory deterioration, cortical spreading depression, edema, microvascular derangement, and pathology in ten major sections. The book includes the thought-provoking discussions that followed the presentations, thus providing an invaluable source of up-to-date information not only for researchers investigating microcirculation but also for clinicians implementing the most effective treatment for stroke patients. **Therapeutic Targets in Airway Inflammation** N. Tony Eissa, David P. Huston, 2003-05-13 This reference examines the cellular, molecular, and genetic mechanisms involved in airway inflammation, as well as the pathophysiology, epidemiology, and aetiology of asthma. It explores strategies to prevent cellular injury and oxidative tissue damage, inhibit key inflammatory pathways, and identify disease-specific targets to reduce the induction. **Critical Care Medicine E-Book** Joseph E. Parrillo, R. Phillip Dellinger, 2013-10-16 Here is the most clinically oriented critical care text focusing on the adult patient.
