Kvietys, 2010 The microcirculation of the gastrointestinal tract is under the control of both myogenic and metabolic regulatory systems The myogenic mechanism contributes to basal vascular tone and the regulation of transmural pressure while the metabolic mechanism is responsible for maintaining an appropriate balance between O<sub>2</sub> demand and O<sub>2</sub> delivery In the postprandial state hydrolytic products of food digestion elicit a hyperemia which serves to meet the increased O<sub>2</sub> demand of nutrient assimilation Metabolically linked factors e.g. tissue pO<sub>2</sub> adenosine are primarily responsible for this functional hyperemia The fenestrated capillaries of the gastrointestinal mucosa are relatively permeable to small hydrolytic products of food digestion e.g. glucose yet restrict the transcapillary movement of larger molecules e.g. albumin This allows for the absorption of hydrolytic products of food digestion without compromising the oncotic pressure gradient governing transcapillary fluid movement and edema formation The gastrointestinal microcirculation is also an important component of the mucosal defense system whose function is to prevent and rapidly repair inadvertent epithelial injury by potentially noxious constituents of chyme Two pathological conditions in which the gastrointestinal circulation plays an important role are ischemia reperfusion and chronic portal hypertension Ischemia reperfusion results in mucosal edema and disruption of the epithelium due in part to an inflammatory response e.g. increase in capillary permeability to macromolecules and neutrophil infiltration Chronic portal hypertension results in an increase in

gastrointestinal blood flow due to an imbalance in vasodilator and vasoconstrictor influences on the microcirculation Table of Contents Introduction Anatomy Regulation of Vascular Tone and Oxygenation Extrinsic Vasoregulation Neural and Humoral Postprandial Hyperemia Transcapillary Solute Exchange Transcapillary Fluid Exchange Interaction of Capillary and Interstitial Forces Gastrointestinal Circulation and Mucosal Defense Gastrointestinal Circulation and Mucosal Pathology I Ischemia Reperfusion Gastrointestinal Circulation and Mucosal Pathology II Chronic Portal Hypertension Summary and Conclusions References Author Biography Heart Physiology and Pathophysiology Yoshihisa Kurachi, Andre Terzic, Michael V.
