Lamb, 1999 The brain is the organ of knowledge and organizer of our abilities our means of recognizing a face in a crowd of conversing about anything we experience or imagine of forming thoughts and developing ideas of instantly understanding words coming rapidly in conversation How does it manage all this Does it represent information in symbols or in the connectivity of a vast network Pathways of the Brain builds a theory to answer such questions Using a top down modeling strategy it charts relationships among words and other products of the brain s linguistic system to reveal properties of that system Going beyond earlier linguistics it sets three plausibility requirements for a valid neurocognitive theory operational developmental and neurological It must show how the linguistic

system can operate for speaking and understanding how it can be learned by children and how it is implemented in neural structures Unlike theories that leave linguistics isolated from science it builds a bridge to biology Of interest to anthropologists linguists neurologists neuroscientists philosophers psychologists and any thoughtful person interested in language or the brain The author is Agnes Cullen Arnold Professor Emeritus of Linguistics and Cognitive Sciences
