Physics and Chemistry of the Arctic Atmosphere Alexander Kokhanovsky, Claudio Tomasi, 2020-01-29 This book presents current knowledge on chemistry and physics of Arctic atmosphere Special attention is given to studies of the Arctic haze phenomenon Arctic tropospheric clouds Arctic fog polar stratospheric and mesospheric clouds atmospheric dynamics thermodynamics and radiative transfer as related to the polar environment The atmosphere cryosphere feedbacks and atmospheric remote sensing techniques are presented in detail The problems of climate change in the Arctic are also addressed **Mathematical Models for Atmospheric Pollutants** R. L. Drake, 1979 **Pathways of pollutants in the atmosphere**, 1979 **Health and Environmental Effects of Ambient Air Pollution** Mohammad Hadi Dehghani, Rama Rao Karri, Teresa Vera, Salwa Kamal Mohamed Hassan, 2024-04-02 Health and Environmental Effects of Ambient Air Pollution is part of a series of three volumes for Air Pollution Human Health and the Environment Volume 1 discusses the adverse consequences of ambient air pollutants on human health animals plants and structures This book examines the production of ambient air pollutants in the environment It begins with an overview of the classifications sources and occurrences of outdoor air pollutants This book covers meteorological climate and topographical factors affecting air pollution discusses how urbanization and industrialization affect air quality and explores how climate conditions like global warming acid rain and airborne particulate matter impact human health It also looks at epidemiology studies and socioeconomic aspects of outdoor air pollution estimating health and cost effects air quality indices guidelines standards and information networks of ambient air pollutants With contributors from experts in the field this book is a valuable reference for academicians researchers and students in environmental health public health and occupational health as well as environmental engineers

meteorologists epidemiologists medical researchers and environmental toxicologists Discusses both causes of ambient air pollution and the toxicological impact on human health Covers the health risk assessment of ambient air with an emphasis on the elements exposure and risk management Examines air quality management and other ambient air pollution solutions Discusses the environmental effects of ambient air pollutants like climate change and global warming Examines the epidemiology studies estimating health and cost effects

Probable Air Pathways for Long-range Transport of Air Pollutants to Lake Athabasca Karen McDonald, Northern River Basins Study (Canada), 1996 From investigation of lake sediments chemical species are known to be transported into northern Alberta river basins via atmospheric pathways This report describes and presents results of a model used to identify the potential atmospheric routes for airborne contaminants to the Athabasca basin The model used was the Atmospheric Environment Service's Lagrangian back trajectory model Differences between frequency of air passages among the seasons and continental regions are noted

Evaluating Environmental Processes and Technologies Matthew Chidozie Ogwu, Sylvester Chibueze Izah, 2025-07-11 This book fills a crucial gap in the literature by providing an in depth exploration of sustainable environmental technologies While individual aspects of environmental management have been addressed in isolation this book offers a holistic view of the technologies and processes that together form the backbone of sustainable practices globally The emphasis on real world case studies from the Global South and the integration of technological advancements make this work timely and essential

Handbook of Air Quality and Climate Change Hajime Akimoto, Hiroshi Tanimoto, 2023-09-27 This handbook covers the air quality air pollution from the viewpoints of causing impacts on human ecosystem health and climate change Traditionally air pollution has been a concern mainly in terms of its impacts on human health and it is still an immediate public and governmental concern in most Asian countries However in recent years so called extreme weather events such as stronger tropical cyclones flooding drought and other phenomena have been manifested causing tremendous losses of human lives and properties Importantly climate models tell us that such extreme weather events are actually induced by anthropogenic global warming It has been pointed out that mitigation or alleviation of such climate change leading to the extreme weather events in the next 30 years can be possible only by reducing air pollutants with positive radiative forcing such as ozone or methane which are called short lived climate pollutants SLCPs Here concerns about mitigation of air pollutants from the points of human health and climate change have merged This book covers different kinds of air pollutants and radiative forcers and how they can be measured It also mentions the situation of air pollutants in different continents and their regional impacts to human health environment and economy as well as their link to extreme weather events The book presents how the air pollution and climate change can be mitigated and how clean air technologies and international initiatives for co controlling air pollution and climate change have been developed
