Biodefense in the Age of Synthetic Biology National Academies of Sciences, Engineering, and Medicine, Division on Earth and Life Studies, Board on Life Sciences, Board on Chemical Sciences and Technology, Committee on Strategies for Identifying and Addressing Potential Biodefense Vulnerabilities Posed by Synthetic Biology, 2019-01-05 Scientific advances over the past several decades have accelerated the ability to engineer existing organisms and to potentially create novel ones not found in nature Synthetic biology which collectively refers to concepts approaches and tools that enable the modification or creation of biological organisms is being pursued overwhelmingly for beneficial purposes ranging from reducing the burden of disease to improving agricultural yields to remediating pollution Although the contributions synthetic biology can make in these and other areas hold great promise it is also possible to imagine malicious uses that could threaten U S citizens and military personnel Making informed decisions about how to address such concerns requires a realistic assessment of the capabilities

that could be misused Biodefense in the Age of Synthetic Biology explores and envisions potential misuses of synthetic biology This report develops a framework to guide an assessment of the security concerns related to advances in synthetic biology assesses the levels of concern warranted for such advances and identifies options that could help mitigate those concerns

plant metabolons TCA cycle metabolons the chemotactic assembly of metabolons and much more **Recent Advances in Biocatalysis and Metabolic Engineering for Biomanufacturing** Eun Yeol Lee, 2019-09-23 The use of biocatalysts including enzymes and metabolically engineered cells has attracted a great deal of attention in the chemical and bio industry because biocatalytic reactions can be conducted under environmentally benign conditions and in more sustainable ways The catalytic efficiency and chemo regio and stereo selectivity of enzymes can be enhanced and modulated using protein engineering Metabolic engineering seeks to enhance cellular biosynthetic productivity of target metabolites via controlling and redesigning metabolic pathways using multi omics analysis genome scale modeling metabolic flux control and reconstruction of novel pathways The aim of this book is to cover the recent advances in biocatalysis and metabolic engineering for biomanufacturing of biofuels chemicals biomaterials and pharmaceuticals Reviews and original research articles on the development of new strategies to improve the catalytic efficiency of enzymes biosynthetic capability of cell factories and their applications in production of various bioproducts and chemicals are included *Theatre, Exhibition, and Curation* Georgina Guy, 2016-04-20 Examining the artistic intellectual and social life of performance this book interrogates Theatre and Performance Studies through the lens of display and modern visual art Moving beyond the exhibition of immaterial art and its documents as well as re enactment in gallery contexts Guy s book articulates an emerging field of arts practice distinct from but related to increasing curatorial provision for live performance Drawing on a recent proliferation of object centric events of display that interconnect with theatre the book approaches artworks in terms of their curation together and re theorizes the exhibition as a dynamic context in which established traditions of display and performance interact By examining the current traffic of ideas and aesthetics moving between theatricality and curatorial practice the study reveals how the reception of a specific form is often mediated via the ontological expectations of another It asks how contemporary visual arts and exhibition practices display performance and what it means to generalize the theatrical as the optic or directive of a curatorial concept Proposing a symbiotic relation between theatricality and display Guy presents cases from international arts institutions which are both displayed and performed including the Tate Modern and the Guggenheim and assesses their significance to the enduring relation between theatre and the visual arts The book progresses from the conventional alignment of theatricality and ephemerality within performance research and teases out a new temporality for performance with which contemporary exhibitions implicitly experiment thereby identifying supplementary modes of performance which other discourses exclude This important study joins the fields of Theatre and Performance Studies with exciting new directions in curation aesthetics sociology of the arts visual arts the creative industries the digital humanities cultural heritage and reception and audience theories Mechanisms of Chemical Degradation of Cement-based Systems K.L. Scrivener, J.F. Young, 1997-04-17 Deterioration of cement based materials is a continuing problem as it results in the substantial shortening of the lives of conventional concrete structures The main costs result from poor performance and the

need for early repair With more advanced applications where very long service lives are essential such as the storage of nuclear waste an understanding of the degradation processes in order to predict long term performance is very important this book forms the proceedings of the latest Symposia at the Materials Research Society Autumn meeting in Boston
