Aranki, 2013-11-29 Cardiac surgical procedures are among the most common and most complicated forms of surgery worldwide and the postoperative period is characterized by complex challenges Among the factors determining ultimate clinical outcome postoperative critical care is of major importance This book adopts a clinical approach in explaining and analyzing the course of clinical care in patients undergoing cardiac surgery Since the postoperative clinical status is directly influenced by preoperative and intraoperative factors the early chapters briefly examine preoperative issues and the intraoperative course of cardiac surgery with particular attention to anesthesia and the process of cardiopulmonary bypass Subsequent chapters primarily address the critical care of patients by means of an organ oriented approach which will enable the reader to use the text as a cookbook of cardiac intensive care This book is intended for use in daily practice by cardiac surgeons cardiac anesthesiologists intensivists and cardiac intensive care nurses **Health Care Evaluation**

**Using Computer Simulation** Boris Sobolev, Victor Sanchez, Lisa Kuramoto, 2012-07-12 The purpose of this book is to place computer simulation studies within the paradigm of intervention research that is concerned with comparing the outcomes of health care delivered under different policies This book presents computer simulation as a tool for testing various policy alternatives that have been developed by decision makers within health care systems This approach differs from the use of computer simulation in operations research where simulation helps determine the configurations of a system that will allow it to function optimally Although simulation of health care processes is not new few health care systems have used simulations as a basis for re engineering the delivery of health services There is growing appreciation that the complexity of health care processes exceeds the capacity of individual disciplines health services research health economics or operations research to guide health care reform In this book the authors focus on bringing the methodological rigor of evaluative research to the design and analysis of such simulation studies The book is intended as a reference for health services researchers It offers a comprehensive description of the methodology of conducting simulation studies in evaluation of service alternatives in surgical care using discrete event models including the steps for identifying the clinical and managerial activities of the perioperative process determining the model requirements implementing simulation models designing simulation experiments and analyzing the experimental data and interpreting and reporting results The book also offers examples of specific aspects of conducting simulation experiments how to determine the number of runs needed to estimate the effect of

implementing a health care policy how to allocate the number of runs to study groups in simulation experiments aiming to evaluate policy or management alternatives and how to use statistical analysis to estimate interpret and report effect sizes
