Engineering the System of Healthcare Delivery William B. Rouse, Denis A. Cortese, 2010 As the United States continues to debate reform of its healthcare system this book argues that providing health insurance for all without improving the delivery system will not improve the current problems of access affordability and quality The US healthcare system has many excellent components strong scientific input extraordinary technology for diagnosis and treatment dedicated staff and top class facilities among them But the system has evolved haphazardly over time and although it has not failed entirely the authors argue that like any system where attention is paid to individual components at the expense of the system as a whole it can never hope to succeed Above all they point out that the US system does not provide high value healthcare it has the highest costs in the world and yet many other countries have lower infant mortality rates and better life expectancy Together with a team of highly regarded thought leaders the authors
