Patronage Of Science In The Nineteenth Century:

The patronage of science in the nineteenth century G. L. E. Turner, 1976 The Patronage of Science in the Nineteenth Century Robert Fox, 1976 The Patronage of Science in the Nineteenth Century , 1976 **The Patronage of Science in the Nineteenth Century: Joint Conference of the British Society for the History of Science and the Past and Present Society, on Friday, 14 April 1972, in the Royal Society, London: Conference Papers** london Joint conference on the patronage of science in the nineteenth century, 1972 **Scientific Advice to the Nineteenth-Century British State** Roland Jackson, 2023-11-14 In twenty first century Britain scientific advice to government is highly organized integrated across government departments and led by a chief scientific adviser who reports directly to the prime minister But at the end of the eighteenth century when Roland Jackson s account begins things were very different With this book Jackson turns his attention to the men of science of the day who derived their knowledge of the natural world from experience observation and experiment focusing on the essential role they played in proffering scientific advice to the state and the impact of that advice on public policy At a time that witnessed huge scientific advances and vast industrial development and as the British state sought to respond to societal economic and environmental challenges practitioners of science engineering and medicine were drawn into close involvement with politicians Jackson explores the contributions of these emerging experts the motivations behind their involvement the forces that shaped this new system of advice and the legacy it left behind His book provides the first detailed analysis of the provision of scientific engineering and medical advice to the nineteenth century British government parliament the civil service and the military **Patronage, Politics, and Practice in Nineteenth-century American Science** Hugh Richard Slotten, 1991 *Bibliography of the History of Medicine* , 1979

Patronage, Practice, and the Culture of American Science Hugh Richard Slotten, 1994-06-24 In this book Hugh Richard Slotten explores the institutional and cultural history of science in the United States The main focus is on the activities of Alexander Dallas Bache great grandson of Benjamin Franklin and the acknowledged chief of the American scientific community during the second third of the nineteenth century Bache played a central role in the organization and management of a number of key scientific institutions including the American Association for the Advancement of Science the Smithsonian Institution and the National Academy of Sciences But his dominance in these institutions was made possible through his control of an organization less well known today the United States Coast Survey which he superintended from 1843 until his death in 1867 Under Bache s command the Coast Survey became the central scientific institution in antebellum America Using richly detailed archival records Slotten pursues an analysis of Bache and the Coast Survey that illuminates important historiographic themes We gain a better understanding of the particular style of nineteenth century American science by examining the role of the Coast Survey as a source of patronage Perhaps most important this study explores the ways in which scientific knowledge and practice are embedded within local contexts Although Bache sought to

use the Coast Survey to raise the status of American science partly by emulating European scientific elites his efforts also reflected the cultural and political values of antebellum America Sloten thus analyzes the interrelationship between political culture patterns of patronage and the institutional practice of science in the United States Governance of Biotechnology in Post-Soviet Russia Tatyana Novossiolova, 2017-07-19 This book provides an up to date analysis of the governance of biotechnology in post Soviet Russia The rapid advancement of the life sciences over the past few decades promises to bring tremendous benefits but also raises significant social ethical legal and security risks Nations adaptability to the twin challenges of attempting to secure the benefits while reducing the risks and threats is a large and still burgeoning governance challenge Here Novossiolova cuts across several sets of literature bringing together elements of the anthropological study of culture history of science and technology management and international governance and Soviet history and politics Due to its multidisciplinary approach in depth analysis accessible style and extensive reference list this text offers invaluable insights into the normative dimensions of the governance of biotechnology unpacking both the formal and intangible attributes and artefacts of biotechnology policy and practice in Russia Scientists and Swindlers Paul Lucier, 2022-02-03 An insightful account of the early fossil fuel industry the rise of the professional consultant and the nexus between science and money Technology and Culture In this impressively researched highly original work Paul Lucier explains how science became an integral part of American technology and industry in the nineteenth century Scientists and Swindlers introduces us to a new service of professionals the consulting scientists Lucier follows these entrepreneurial men of science on their wide ranging commercial engagements from the shores of Nova Scotia to the coast of California and shows how their innovative work fueled the rapid growth of the American coal and oil industries and the rise of American geology and chemistry Along the way he explores the decisive battles over expertise and authority the high stakes court cases over patenting research the intriguing and often humorous exploits of swindlers and the profound ethical challenges of doing science for money Starting with the small surveying businesses of the 1830s and reaching to the origins of applied science in the 1880s Lucier recounts the complex and curious relations that evolved as geologists chemists capitalists and politicians worked to establish scientific research as a legitimate regularly compensated and respected enterprise This sweeping narrative enriches our understanding of how the rocks beneath our feet became invaluable resources for science technology and industry The Patronage of Science in the Nineteenth Century Robert Fox, 1972 The X Club Ruth Barton, 2018-11-21 In 1864 amid headline grabbing heresy trials members of the British Association for the Advancement of Science were asked to sign a declaration affirming that science and scripture were in agreement Many criticized the new test of orthodoxy nine decided that collaborative action was required The X Club tells their story These six ambitious professionals and three wealthy amateurs J D Hooker T H Huxley John Tyndall John Lubbock William Spottiswoode Edward Frankland George Busk T A Hirst and Herbert Spencer wanted to guide the development of science and public opinion on

issues where science impinged on daily life religious belief and politics They formed a private dining club which they named the X Club to discuss and further their plans As Ruth Barton shows they had a clear objective they wanted to promote scientific habits of mind which they sought to do through lectures journalism and science education They devoted enormous effort to the expansion of science education with real but mixed success For twenty years the X Club was the most powerful network in Victorian science the men succeeded each other in the presidency of the Royal Society for a dozen years Barton's group biography traces the roots of their success and the lasting effects of their championing of science against those who attempted to limit or control it along the way shedding light on the social organization of science the interactions of science and the state and the places of science and scientific men in elite culture in the Victorian era **Utopia's Garden** E. C. Spary, 2010-12-15 The royal Parisian botanical garden the Jardin du Roi was a jewel in the crown of the French Old Regime praised by both rulers and scientific practitioners Yet unlike many such institutions the Jardin not only survived the French Revolution but by 1800 had become the world's leading public establishment of natural history the Muséum d'Histoire Naturelle E. C. Spary traces the scientific administrative and political strategies that enabled the foundation of the Muséum arguing that agriculture and animal breeding rank alongside classification and collections in explaining why natural history was important for French rulers But the Muséum's success was also a consequence of its employees Revolutionary rhetoric by displaying the natural order they suggested the institution could assist in fashioning a self-educating self-policing Republican people Natural history was presented as an indispensable source of national prosperity and individual virtue Spary's fascinating account opens a new chapter in the history of France science and the Enlightenment Second Chance Werner Eugen Mosse, Julius Carlebach, 1991 **Science, Enlightenment and Revolution** Dorinda Outram, 2021-10-01 Science Enlightenment and Revolution brings together thirteen papers by renowned historian Dorinda Outram Published between 1976 and 2019 and scattered in a variety of journals and collected volumes these articles are published together here for the first time During her distinguished career Outram has made significant contributions to the history of science to the history and historiography of the Enlightenment to gender history to the history of geographical exploration and to the historical uses of language This volume also includes other writings by Outram comprising an unpublished introduction in the form of an intellectual autobiography Placing this together with her collected academic papers offers readers an overview of her development as an historian and a writer This book is important reading for scholars and students of early modern Europe as well as those interested in the Enlightenment the French Revolution and gender studies CS 1101 Science and Religion Gary B. Ferngren, 2002-08 Written by distinguished historians of science and religion the thirty essays in this volume survey the relationship of Western religious traditions to science from the beginning of the Christian era to the late twentieth century This wide-ranging collection also introduces a variety of approaches to understanding their intersection suggesting a model not of inalterable conflict but of complex interaction Tracing the rise of science from its birth in the medieval West

through the scientific revolution the contributors describe major shifts that were marked by discoveries such as those of Copernicus Galileo and Isaac Newton and the Catholic and Protestant reactions to them They assess changes in scientific understanding brought about by eighteenth and nineteenth century transformations in geology cosmology and biology together with the responses of both mainstream religious groups and such newer movements as evangelicalism and fundamentalism The book also treats the theological implications of contemporary science and evaluates recent approaches such as environmentalism gender studies social construction and postmodernism which are at the center of current debates in the historiography understanding and application of science Contributors Colin A Russell David B Wilson Edward Grant David C Lindberg Alnoor Dhanani Owen Gingerich Richard J Blackwell Edward B Davis Michael P Winship John Henry Margaret J Osler Richard S Westfall John Hedley Brooke Nicolaas A Rupke Peter M Hess James Moore Peter J Bowler Ronald L Numbers Steven J Harris Mark A Noll Edward J Larson Richard Olson Craig Sean McConnell Robin Collins William A Dembski David N Livingstone Sara Miles and Stephen P Weldon **Australian Science in the Making** R.
