Levy, 2012-12-06 Providing both historical background and recent advances this series reviews in depth the biologic molecular immunologic and patholic features of this facinating virus family The current volume focuses on the avian and murine species which have generated novel insights into cancer and the evolution of the retroviridae Viruses and Human Disease Ellen G. Strauss, James H. Strauss, 2007-09-21 Completely revised and updated the new edition of this groundbreaking text integrates basic virology with pathophysiological conditions to examine the connection between virology and human disease Most virology textbooks focus on the molecular biology involved without adequate reference to physiology This text focuses on viruses that infect humans domestic animals and vertebrates and is based on extensive course notes from James Strauss virology class at the California Institute of Technology taught for over 30 years Expertly depicting in color the molecular structure and replication of each virus it provides an excellent overview for students and professionals interested in viruses as agents of human disease Includes over 30% new material virtually all of the figures and tables have been redrawn to include the latest information and the text has been extensively rewritten to include the most up to date information Includes a new chapter on emerging and reemerging viral diseases such as avian flu SARS the spread of West Nile virus across America and the continuing spread of Nipah virus in Southeast Asia Further reading sections at the end of each chapter make it easy find key references World maps depicting the current distribution of existing and newly emerging viruses are also incorporated into the text Infectious Diseases of Wild Mammals and Birds in Europe Dolorés Gavier-Widen, J. Paul Duff, Anna Meredith, 2012-07-10 INFECTIOUS DISEASES OF WILD MAMMALS AND BIRDS IN EUROPE Infectious Diseases of Wild Mammals and Birds in Europe is a key resource on the diagnosis and treatment of infectious diseases in

European wildlife that covers the distinctive nature of diseases as they occur in Europe including strains insect vectors reservoir species and climate as well as geographical distribution of the diseases and European regulations for reporting diagnosis and control Divided into sections on viral infections bacterial infections fungal and yeast infections and prion infections this definitive reference provides valuable information on disease classification and properties causative agents epidemiology pathogenesis and implications for human domestic and wild animal health KEY FEATURES Brings together extensive research from many different disciplines into one integrated and highly useful definitive reference Zoonotic risks to human health as well as risks to pets and livestock are highlighted Each disease is covered separately with practical information on the animal species in which the disease has been recorded clinical signs of the disease diagnostic methods and recommended treatments and vaccination Wildlife vaccination and disease surveillance techniques are described Examines factors important in the spread of disease such as changing climate the movement of animals through trade and relaxations in the control of wild animal populations Written by a team of pathologists epidemiologists and clinicians from across Europe this is the definitive resource for infectious diseases of wild mammals and birds in Europe It will be an invaluable reference for veterinarians conservation biologists epidemiologists and wildlife researchers managers rehabilitators and students Concepts in Viral Pathogenesis III Abner L. Notkins, Michael B.A. Oldstone, 2012-12-06 The all new Concepts in Viral Pathogenesis III contains the widely praised format of presenting up to date information in pithy easily read mini review style and complements previous editions with contributions by leading international authorities on structure function relationships gene regulation cell biology of viral infections transgenic mice expression of viral genes retroviruses and evolving concepts in viral diseases Taken together Volume I II and III of Concepts in Viral Pathogenesis contain 145 unique chapters each representing the latest thinking in important areas of virology by the foremost investigators in the field Clinicians laboratory scientists students and others seeking authoritative overviews of current knowledge on the mechanism of viral diseases will welcome this valuable resource **Retroviruses and Disease** Hidesaburo Hanafusa. DiRita, Terence Dermody, 2007 Now in full color the Fourth Edition of this text gives students a thorough understanding of microbial agents and the pathophysiology of microbial diseases The text facilitates learning and recall by emphasizing unifying principles and paradigms rather than forcing students to memorize isolated facts by rote Case studies with problem solving questions give students insight into clinical applications of microbiology Each chapter ends with review and USMLE style questions For this edition all schematic illustrations have been re rendered in full color and new illustrations have been added A new online site for students includes animations USMLE style questions and all schematic illustrations and photographs from the text Textbook of Microbiology & Immunology Parija, 2009 This book provides an up to date information on microbial diseases which is an emerging health problem world over This book presents a comprehensive

coverage of basic and clinical microbiology including immunology bacteriology virology and mycology in a clear and succinct manner The text includes morphological features and identification of each organism along with the pathogenesis of diseases clinical manifestations diagnostic laboratory tests treatment and prevention and control of resulting infections along with most recent advances in the field About the Author Subhash Chandra Parija MD PhD DSc FRCPath is Director Professor and Head Department of Microbiology Jawaharlal Institute of Postgraduate Medical Education and Research JIPMER Pondicherry India Professor Parija author of more than 200 research publications and 5 textbooks is the recipient of more than 20 National and International Awards including the most prestigious Dr BC Roy National Award of the Medical Council of India for his immense contribution in the field of Medical Microbiology **Microorganisms and Autoimmune Diseases** Herman Friedman, Noel R. Rose, Mauro Bendinelli, 2012-12-06 Experts in microbiology and autoimmunity examine the association between microorganisms and the development of specific categories of autoimmune diseases The opening chapters explore the bacterial induction of diseases considered autoimmune in nature Subsequent chapters describe the role of viruses in the induction of these diseases and of diseases with an autoimmune component Specific topics include the role of streptococcal infection in rheumatic fever and the role of Klebsiella in the development of ankylosing spondylitis Virus Diseases in Laboratory and Captive Animals Gholamreza Darai, 2012-12-06 The influence of basic science particularly molecular biology in human and veterinary medicine revolutionized thinking in many aspects and changed fundamentally and creatively the classical strategy for research and prevention of infectious diseases Genetic engineering and related disciplines have progressed to a remarkable degree over the last decade and now form the keystone supporting medicine These are strong and efficient instruments for health and disease oriented research and their application gives the opportunity to receive more answers and not only more questions. The prime objective of this book is to create new knowledge within the medical disciplines and inspire colleagues working in this field with the unity and unambiguous importance of this science and its technologies for identifying clarifying and planning new strategies for curing and preventing disease This book contains original studies on the molecular biology of animal viruses Some of the viruses discussed in this book are also hazardous to man In this light it can be considered as a contribution to modern education on the human infectious diseases From this point of view the book contains a chapter on Hantaan virus that causes no detectable disease in animals but hemorrhagic fever with renal syndrome has been attributed to infection of humans by this Retroviruses of Human A.I.D.S. and Related Animal Diseases Marc Girard, Louis Valette, 1993 HIV & AIDS, 5Ed virus Robert J.
