Protecting Yellowstone Michael J. Yochim,2013-04-15 Yellowstone National Park looks like a pristine western landscape populated by its wild inhabitants bison grizzly bears and wolves But the bison do not always range freely snowmobile noise intrudes upon the park's profound winter silence and some tourist villages are located in prime grizzly bear habitat Despite these problems the National Park Service has succeeded in reintroducing wolves allowing wildfires to play their natural role in park forests and prohibiting a gold mine that would be present in other more typical western landscapes Each of these issues bison snowmobiles grizzly bears wolves fires and the New World Mine was the center of a recent policy making controversy involving federal politicians robust debate with interested stakeholders and discussions about the relevant science Yet the outcomes of the controversies varied considerably depending on politics science how well park managers allied themselves with external interests and public thinking about the effects of park proposals on their access and economies Michael Yochim examines the primary influences upon contemporary national park policy making and considers how those influences shaped or constrained the final policy In addition Yochim considers how park managers may best work within the contemporary policy making context to preserve national parks

Latva,Heta Lähdesmäki,Kirsi Sonck-Rautio,Harri Uusitalo,2024-09-23 This book explores the human relationship to changing biodiversity by bringing together multidisciplinary insights into human nature relations from the humanities New animal and plant species arrive and previously existing ones may disappear However the historical and social perspectives of the changes have been understudied so far This book approaches the human relationship with changing biodiversity from three different angles belonging and non belonging emotions and environmental policy The question of belonging and non belonging is crucial when it comes to changing biodiversity The authors ask who decides where species can move and live and when invasive becomes native Similarly emotions have a big role in human nature relations The book shows why we grieve the loss of some species and hate some other species and how our emotions change over time The writers also aim to

show how environmental policies or the practice of governing species are affected by societal discussion emotions scientific research and topical concepts as well as how these policies shape biodiversity and our perceptions of different species The authors provide fresh insights into human nature relations and explain why we need multidisciplinary approaches in order to fully understand their complexity

Vicious Jon T. Coleman, 2008-10-01 Over a continent and three centuries American livestock owners destroyed wolves to protect the beasts that supplied them with food clothing mobility and wealth The brutality of the campaign soon exceeded wolves misdeeds Wolves menaced property not people but storytellers often depicted the animals as ravenous threats to human safety Subjects of nightmares and legends wolves fell prey not only to Americans thirst for land and resources but also to their deeper anxieties about the untamed frontier Now Americans study and protect wolves and jail hunters who shoot them without authorization Wolves have become the poster beasts of the great American wilderness and the federal government has paid millions of dollars to reintroduce them to scenic habitats like Yellowstone National Park Why did Americans hate wolves for centuries And given the ferocity of this loathing why are Americans now so protective of the animals In this ambitious history of wolves in America and of the humans who have hated and then loved them Jon Coleman investigates a fraught relationship between two species and uncovers striking similarities deadly differences and all too frequently tragic misunderstanding
