

A sunset over a body of water with a pier and a path leading into the distance.

One is always a long way
from solving a problem until
one actually has the answer.

Wiener: A Mathematician Among Engineers Jose Maria Almira, 2022-12-16 Norbert Wiener 1894 1964 is well known by the general public as the founder of Cybernetics by mathematicians as one of the first north American mathematicians who win international prestige as the person who formalized Brownian motion solved the Zaremba problem and was the author of two seminal papers devoted to Generalized Harmonic Analysis and Tauberian Theorems and by engineers as the person who proposed much of the Fourier analysis used by them and contributed to the foundation of the statistical theory of communication which includes the use of wave filter theory information theory and prediction theory in control and communications as well as the automation of all types of electronic devices Wiener s research which was frequently motivated by physics engineering or biology was a clever mixture of Fourier analysis and probability theory His contributions to electronics through his work on filtering that is the separation of noise from a message and the theory of prediction made

him very valuable to electronics engineering In addition Wiener addressed many other topics including the formalization of the Brownian motion ergodic theory wave filter theory and information theory Taking all these ingredients together he ventured to create a new scientific paradigm cybernetics This book contains a detailed explanation of Wiener s life his many colleagues and the historical context in which he lived as well as Wiener s work It also contains a large appendix about Wiener Shannon and the rise of a Digital World The main focus of the book is on Wiener s work related to electrical and electronic engineering and the way he used his mathematics to create the main concepts and techniques of the statistical theory of communication In particular the author presents Wiener surrounded by the engineers that worked at MIT with whom he maintained strong contact It was in this atmosphere that information theory arose and Wiener was a main influence on the people who developed that theory

The Dome of Eden Stephen H. Webb, 2010-01-01 What would biology look like if it took the problem of natural evil seriously This book argues that biological descriptions of evolution are inherently moral just as the biblical story of creation has biological implications A complete account of evolution will therefore require theological input The Dome of Eden does not try to harmonize evolution and creation Harmonizers typically begin with Darwinism and then try to add just enough religion to make evolution more palatable or they begin with Genesis and pry open the creation account just wide enough to let in a little bit of evolution By contrast Stephen Webb provides a theory of how evolution and theology fit together and he argues that this kind of theory is required by the internal demands of both theology and biology The Dome of Eden also develops a theological account of evolution that is distinct from the intelligent design movement Webb shows how intelligent design properly discerns the inescapable dimension of purpose in nature but like Darwinism itself fails to make sense of the problem of natural evil Finally this book draws on the work of Karl Barth to advance a new reading of the Genesis narrative and the theology of Duns Scotus to provide the necessary metaphysical foundation for evolutionary thought
