use rotational kinematic equations to solve problems involving objects undergoing angular accelerations includes 4 multi part problems problem set rk8 using the big 4 eqns and linear relationships combine an understanding of linear and angular quantities with the use of rotational kinematic equations to analyze complex rotation scenarios

rotational kinematics just like linear kinematics is descriptive and does not represent laws of nature with kinematics we can describe many things to great precision but kinematics does not consider causes for example a large angular acceleration describes a very rapid change in angular velocity without any consideration of its cause

equation overview for rotational kinematics problems - Feb 12 2023

we have 8 ready to use problem sets on the topic of rotational kinematics these problem sets focus on the analysis of situations involving a rigid object rotating in either a clockwise or counterclockwise direction about a given point the object's rotation speed may be increasing decreasing or remaining constant

problem a merry go round has an initial angular velocity of 10.2 rpm at the end of the ride the brakes are applied giving it a constant angular deceleration of 0.032 rad/s² as the ride slows to a stop

rotational kinematics in the section on uniform circular motion we discussed motion in a circle at constant speed and therefore constant angular velocity however there are times when angular velocity is not constant rotational motion can speed up

evaluate problem solving strategies for rotational kinematics just by using our intuition we can begin to see how rotational quantities like θ , ω and α are related to one another for example if a motorcycle wheel has a large angular acceleration for a fairly long time it ends up spinning rapidly and rotates through many revolutions
