shown a significant shift from yesterday's conventional learning and teaching given this era's current educational and social contexts. Learners are no longer learning and communicating with human-generated, computed and mediated or traditional learning and instructional practices, paving the way for machine-facilitated communication learning and teaching tools. Learning and instruction communication and information exchange as well as gathering, coding, analyzing and synthesizing data have proven to be in need of even more innovative technology-mediated tools. Applications of Machine Learning and Artificial Intelligence in Education focuses on the parameters of remote learning, machine learning, deep learning and artificial intelligence under 21st-century learning and instructional contexts. Covering topics such as data coding and social networking technology, it is ideal for learners with an interest in the deep learning discipline, educators, educational technologists, instructional designers and data evaluators as well as special interest groups (SIGs) in the discipline.

Translation, Translanguaging and Machine Translation in Foreign Language Education David

Coulson, Christopher Denman, 2025-03-22 This book focuses on a wide range of topics about the current and emergent roles and uses of translation and translanguaging in the teaching and learning of foreign languages. This is an area that has been gaining increasing momentum in recent years with traditional understandings and practices in the uses of translation for language instruction being challenged and in many cases disrupted by the rapid development of machine translation apps such as DeepL and the ChatGPT translator. The improving quality and widespread deployment of such technologies are causing instructors and students around the world to reconsider not only their pedagogic approaches to the use of translation in the classroom but also what effective instruction looks like. The contributing authors provide an up-to-date and detailed view of this area. This includes voices from researchers and professional educators from around the world. As the book's focus, they examine the current and projected future roles of translation in foreign language learning and teaching within which a wide range of topics are explored. This book will be of interest to researchers, scholars and teachers in foreign and second language education, EFL/ESL translation studies, applied linguistics, multilingualism and education. **Machine**
