Neural Mechanisms Of Higher Vertebrate:

Neural Mechanisms of Higher Vertebrate Behavior Ivan Solomonovich Beritashvili, 1965 Vertebrate Memory I. Beritashvili, 2012-12-06 activity relevant both to animals and to man This part of our study was summarized in 1947 in the book On the Basic Forms of Neural and Psycho neural Activity Then in the 1940 s and 1950 s we carried out a multifaceted study of spatial orientation in the environment one of the higher forms of psychic activity of vertebrates and man In the study of spatial orientation which is based entirely on psychic memory we come even closer to the study of the latter The roles of visual auditory vestibular olfactory and proprioceptive receptors and the dependence of memory on them for orientation in space were investigated along with the roles of different regions of the cortex and other parts of the brain in these manifestations of memory The results of this investigation were summarized in 1959 in the book On Neural Mechanisms of Spatial Orientation in Higher Vertebrates In the last ten years we have set ourselves the goal of a multifaceted study of the origin of image memory in different representatives of the vertebrate series from fish to monkeys inclusively **Neural Mechanisms of Higher Vertebrate Behavior ... Gunilla E. Öberg, 2013-10-22 The Neostriatum presents the puzzles of the neostriatum from many different angles This book presents significant findings concerning the structure and neurotransmitters of the neostriatum Organized into four parts encompassing 20 chapters this book begins with an overview of the basic organization of the neostriatum This text then illustrates an impressive complexity of extrinsic and intrinsic neostriatum circuitry Other chapters consider the view that the nervous system evolved as a hierarchy so that non cortical structures such as the corpus striatum retain their structure and

function even when the latter is made subservient to more developed mechanisms of the cerebral cortex This book discusses as well the behavioral roles of the neostriatum and reviews the behavioral data obtained with each of the major treatment and recording techniques The final chapter deals with the important features of striatal functions This book is a valuable resource for neuropsychopharmacologists neuropsychologists neurophysiologists psychologists and scientists *Model Systems and the Neurobiology of Associative Learning* Joseph E. Steinmetz, Mark A. Gluck, Paul R. Solomon, 2013-09-05 This volume contains a collection of papers written by former students postdoctoral fellows and colleagues of Richard Thompson and represent written versions of papers presented at the Festschrift symposium The Festschrift provided an excellent opportunity for the participants to recount their memories and experiences of working with one of the leading figures in behavioral neuroscience and to place their current research in the context of earlier research conducted in the Thompson laboratory As a Festschrift volume the various chapters contain numerous and sometimes very personal references to Richard Thompson's influence on the careers of the authors as well as summaries of past and present work being conducted in the authors laboratories Part I includes studies of spinal cord plasticity and the involvement of the hippocampus and related structure in classical eyeblink conditioning Part II explores the critical role of the cerebellum and associated areas in classical eyeblink conditioning Part III focuses on a continued exploration of the involvement of the cerebellum in classical eyeblink conditioning using standard procedures as well as innovative molecular biology and genetic techniques It also includes studies aimed at delineating modulatory influences on learning such as stress and hormonal factors The incredible influence that Richard Thompson has had on the fields of experimental psychology and neuroscience should be evident on reading the contributions made by the various authors to this volume The research conducted in Thompson's laboratory over the years has been cutting edge comprehensive and influential Therefore this volume is dedicated to Richard F Thompson a productive innovative scientist and outstanding mentor Dog Behaviour, Evolution, and Cognition Ádám Miklósi, 2015 This is the first book to collate and synthesize the recent burgeoning primary research literature on dog behaviour evolution and cognition The author presents a new ecological approach to the understanding of dog behaviour demonstrating how dogs can be the subject of rigorous and productive scientific study without the need to confine them to a laboratory environment This second fully updated edition of *Dog Behaviour Evolution and Cognition* starts with an overview of the conceptual and methodological issues associated with the study of the dog followed by a brief description of their role in human society An evolutionary perspective is then introduced with a summary of current research into the process of domestication The central part of the book is devoted to issues relating to the cognitive aspects of behaviour which have received particular attention in recent years from both psychologists and ethologists The book's final chapters introduce the reader to many novel approaches to dog behaviour set in the context of behavioural development and genetics This second edition recognises and discusses the fact that dogs are increasingly being used as model organisms for studying aspects of human biology such as

genetic diseases and ageing Specific attention is also given in this edition to attachment behaviour which emerges between humans and dogs the importance of inter specific communication in the success of dogs in human communities and the broad aspects of social cognition and how this may contribute to human dog cooperation Directions for future research are highlighted throughout the text which also incorporates links to human and primate research by drawing on homologies and analogies in both evolution and behaviour The book will therefore be of relevance and use to anyone with an interest in behavioural ecology including graduate students of animal behaviour and cognition as well as a more general audience of dog enthusiasts biologists psychologists veterinarians and sociologists
