

The background of the book cover is an abstract, high-contrast pattern of dark green and black. It features thick, irregular, wavy lines that create a sense of depth and movement, resembling a stylized topographical map or a complex, organic structure. The pattern is symmetrical and repeats itself across the entire surface.

Neurobiology Of Spatial Behaviour:

The Neurobiology of Spatial Behaviour Kathryn J. Jeffery, 2003 The Neurobiology of Spatial Behaviour is a crucial new reference in the dynamic field of navigation Kate Jeffery has assembled the creme de la creme of authors on current issues in spatial cognition and in doing so has produced the most comprehensive and up to date reference on the neurobiological and behavioural mechanisms of navigation This book is essential reading for anyone who is curious about how human and non human animals find their way about and how space is represented in the brain Dr Nicola S Clayton Reader in Comparative Cognition Clare College Cambridge This book explores the relationship between cellular processes and animal behaviour It does this by focusing on the domain of navigation bringing together scientists from either side of the brain behaviour divide in an attempt to explain the linkage between spatial behaviour and the underlying activity of neurons The Wiley Handbook on the Cognitive Neuroscience of Learning Robin A. Murphy, Robert C. Honey, 2016-05-26 The Wiley Handbook on the Cognitive Neuroscience of Learning charts the evolution of associative analysis and the neuroscientific study of behavior as parallel approaches to understanding how the brain learns that both challenge and inform each other Covers a broad range of topics while maintaining an overarching integrative approach Includes contributions from leading authorities in the fields of cognitive neuroscience associative learning and behavioral psychology Extends beyond the psychological study of learning to incorporate coverage of the latest developments in neuroscientific research Ecology and Behavior of Chickadees and Titmice Ken A. Otter, 2007-02 Members of the Paridae family represent popular organisms for ornithological research This is due to the flexibility to study this group of birds in both the lab and the natural environment In contrast to previously published literature this volume concentrates on research themes The editor has invited a team of leading specialists to provide a synopsis of ecological and behavioural research and to compare and contrast this with what is known from Old World members of this family e g blue tit and great tit as well as other avian groups Encyclopedia of Neuroscience, Volume 1 Larry R. Squire, 2009-06-12 The Encyclopedia of the Neuroscience explores all areas of the discipline in its focused entries on a wide variety of topics in neurology neurosurgery psychiatry and other related areas of neuroscience Each article is written by an expert in that specific domain and peer reviewed by the advisory board before acceptance into the encyclopedia Each article contains a glossary introduction a reference section and cross references to other related encyclopedia articles Written at a level suitable for university undergraduates the breadth and depth of coverage will appeal beyond undergraduates to professionals and academics in related fields The Cognitive Neurosciences, sixth edition David Poeppel, George R. Mangun, Michael S. Gazzaniga, 2020-04-21 The sixth edition of the foundational reference on cognitive neuroscience with entirely new material that covers the latest research experimental approaches and measurement methodologies Each edition of this classic reference has proved to be a benchmark in the developing field of cognitive neuroscience The sixth edition of The Cognitive Neurosciences continues to chart new directions

in the study of the biological underpinnings of complex cognition the relationship between the structural and physiological mechanisms of the nervous system and the psychological reality of the mind It offers entirely new material reflecting recent advances in the field covering the latest research experimental approaches and measurement methodologies This sixth edition treats such foundational topics as memory attention and language as well as other areas including computational models of cognition reward and decision making social neuroscience scientific ethics and methods advances Over the last twenty five years the cognitive neurosciences have seen the development of sophisticated tools and methods including computational approaches that generate enormous data sets This volume deploys these exciting new instruments but also emphasizes the value of theory behavior observation and other time tested scientific habits Section editors Sarah Jayne Blakemore and Ulman Lindenberger Kalanit Grill Spector and Maria Chait Tom s Ryan and Charan Ranganath Sabine Kastner and Steven Luck Stanislas Dehaene and Josh McDermott Rich Ivry and John Krakauer Daphna Shohamy and Wolfram Schultz Danielle Bassett and Nikolaus Kriegeskorte Marina Bedny and Alfonso Caramazza Liina Pylkk nen and Karen Emmorey Mauricio Delgado and Elizabeth Phelps Anjan Chatterjee and Adina Roskies Neurobiology of Comparative Cognition Raymond P. Kesner, David S. Olton, 2014-02-25 This book represents a unique and elaborate exposition of the neural organization of language memory and spatial perception in a wide variety of species including humans bees fish rodents and monkeys The editors have united the comparative approach with its emphasis on evolutionary determinants of behavior the neurobiological approach with its emphasis on the neural determinants of behavior and the cognitive approach with its emphasis on understanding higher order mental functions The combination of these three approaches provides an unusual look at the neurobiology of comparative cognition and should stimulate increased investigations in this field and related disciplines The Hippocampus Book Richard Morris, David G. Amaral, Tim Bliss, Karen Duff, John O'Keefe, 2024-11 Known to be important for memory the hippocampus has long been a prime focus for neuroscience research This second edition of The Hippocampus Book is written by experts in a wide range of disciplines with new chapters summarizing how disorders of hippocampal function contribute to neurological and psychiatric conditions The editors draw on their experience in hippocampal anatomy physiology cognitive neuroscience and disease pathobiology to weave together an authoritative book which will interest those working in numerous neuroscientific disciplines The Visual World in Memory James R. Brockmole, 2008-10-07 The book examines how well we remember what we see It pulls together the field with a series of chapters that concisely present the state of the science in all the areas of research *Cognition, Evolution, and Behavior* Sara J. Shettleworth, 2010-04-10 How do animals perceive the world learn remember search for food or mates communicate and find their way around Do any nonhuman animals count imitate one another use a language or have a culture What are the uses of cognition in nature and how might it have evolved What is the current status of Darwin s claim that other species share the same mental powers as humans but to different degrees In this completely revised second edition of Cognition

Evolution and Behavior Sara Shettleworth addresses these questions among others by integrating findings from psychology behavioral ecology and ethology in a unique and wide ranging synthesis of theory and research on animal cognition in the broadest sense from species specific adaptations of vision in fish and associative learning in rats to discussions of theory of mind in chimpanzees dogs and ravens She reviews the latest research on topics such as episodic memory metacognition and cooperation and other regarding behavior in animals as well as recent theories about what makes human cognition unique In every part of this new edition Shettleworth incorporates findings and theoretical approaches that have emerged since the first edition was published in 1998 The chapters are now organized into three sections Fundamental Mechanisms perception learning categorization memory Physical Cognition space time number physical causation and Social Cognition social knowledge social learning communication Shettleworth has also added new chapters on evolution and the brain and on numerical cognition and a new chapter on physical causation that integrates theories of instrumental behavior with discussions of foraging planning and tool using
