field Covers a potentially complex subject in a logical and clinically relevant format *Integrative Views of Motivation, Cognition, and Emotion* William D. Spaulding, Herbert Alexander Simon, 1994-01-01 Psychological theory has traditionally attempted to explain events in terms of motivation emotion or cognition Over the past decade psychology has come to be viewed as a paradigmatic science the new paradigm being the understanding of behavior in terms of cognitive representations This cognitive revolution has fostered a view of the passing of information back and forth between perceptual memory and motor components of an integrated system known as the computational metaphor With cognition as the new paradigm can we expect that the explanatory scope of psychology will be clarified Will a cognitive perspective be extended to phenomena that have traditionally fallen under the rubric of motivation and emotion The psychologists involved in this volume of the Nebraska Symposium address these questions specifically Their contributions stimulate a hypothesis that the cognitive paradigm has begun to move psychology toward a unified field theory of behavior and experience Herbert A Simon tests the limits of a pure information processing paradigm A basic tenet of this theoretical approach is that information exists independent of the medium by which it is represented By analyzing the information processing capabilities of nonbiological systems or artificial intelligence we may determine which aspects of motivation and emotion require the biological substrate of cognition Muriel D Lezak raises a similar question by focusing on the biological substrate itself and by analyzing the constraints and determinations that it imposes Howard Gardner considers the medium and the information it processes thus he lays a conceptual foundation for making the facts of biological brain science congruent with the richness of human behavior and experience **Head Injury** Peter C.
