Critical Leg Ischaemia John A. Dormandy, Günter Stock, 2012-12-06 Jean Natali The pathophysiology and management of chronic critical limb ischaemia CLI has always been a problematic area at least partly because it involves doctors from a wide range of the traditional medical specialities including vascular surgery angiology diabetology haematology and radiology The treatment of these patients also varies largely with local circumstances and national traditions CLI therefore seemed a particularly appropriate subject for a new type of European consensus approach In 1988 a series of small workshops were held by the European Working Group on Critical Limb Ischaemia to discuss the definition pathophysiology in vestigation and management of this condition The process culminated in a meeting in Berlin in March 1989 where 120 specialists from sixteen European countries representing the basic sciences as well as a spectrum of clinical disciplines met to evolve a Consensus Document on the subject with specific recommendations The Document which is reproduced in the first section of this book does not of course necessarily represent the unanimous view of all those who participated in its compilation however it is agreed that it does represent a consensus or majority view It was also noted that the comments and recommendations in the document should be taken as a whole and are not intended to dictate the only correct approach to individual treatment
