**Mouse as a Model Organism** Cord Brakebusch, Taina Pihlajaniemi, 2011-03-29 Cell culture based research is important for our understanding of biological processes at the cellular and molecular level Using this approach the previous decades have produced a wealth of mechanistic information in all areas of biomedical research Such in vitro research however lacks the complexity of in vivo investigations where many different cell types interact with each other in a normal three dimensional environment with normal levels of cytokines and growth factors Furthermore complex human diseases such as cancer diabetes or chronic inflammation can only be modeled in vivo Due to its small size its short reproduction time and the possibility to introduce specific gene mutations the mouse has become the favourite mammalian model organism to study in vivo function of genes during development and in disease This book combines review articles on selected subjects presented at the symposium Mouse as a Model Organism From Animals to Cells held in Rovaniemi Finland 2009 Among other topics high throughput phenotyping of mouse mutants mouse phenotypes dependent on nature and nurture and a spectrum of in vivo ex vivo and in vitro methods to study cancer in mice are described This book will give an excellent introduction to scientists interested in the use of mice as a model to understand complex biological questions in the post genomic era It will highlight the possibilities but also discuss the current problems and shortcomings to give a realistic view of the current state of art in this fascinating field of biomedical research

*Kidney Cancer* Okio Hino, 1999-01-01 Cancer is above all a heritable disorder of somatic cells and gene expression but environment is also involved in its origin Hereditary kidney cancer should prove valuable to understand the mechanisms of disease and to the development of therapeutic measures Recently scientists have succeeded in cloning and identifying the genes responsible for the following familial kidney cancers von Hippel Lindau disease papillary renal cell carcinoma tuberous sclerosis and Wilms tumor all autosomal dominant This book brings together some of the most recent advances made with respect to kidney cancers Leading investigators present recent results on VHL MET TSC1 and TSC2 and WT1 genes among others as well as on environmentally induced kidney cancers caused by long term hemodialysis or induced chemically and their treatments surgery and gene therapy providing an excellent survey of this field This publication will be of interest to both researchers and clinicians concerned with cancer of the kidney

**Colorectal Cancer: Molecular Mechanisms, Premalignant State and Its Prevention** W. Schmiegel, J. Schölmerich, 1999-04-30 Colorectal cancer is one of the most common causes of tumour associated death in Western countries and its incidence has been increasing in recent decades The most important determinant for the course of the disease is tumour stage at the time of diagnosis The detection of molecular changes in tumour tissue and in benign adenomatous polyps has improved our knowledge of colorectal carcinogenesis Diseases with a high risk for malignant transformation as well as family predisposition as an independent risk factor have been identified Furthermore dietary and

environmental factors together with the intake of aspirin and other NSAIDs influence tumor development This implies new ways of specific testing for early diagnosis and new prevention strategies based on endoscopy and drug therapy The main topics of this book the proceedings of the international Falk Symposium No 109 held in Titisee Germany on October 14 15 1998 are molecular mechanisms premalignant state and prevention State of the art chapters deliver the latest scientific developments on every topic followed by more detailed chapters on specific items      **Urinary System** Thomas C.

Hard,Ulrich Mohr,2013-03-12 Several compounds are associated with experimentally induced neoplasms in the urinary systems and especially the kidneys of laboratory animals Many of these neoplasms are succinctly described and illustrated in detail in this volume and some are compared with spontaneously occurring lesions Pragmatic aspects of disease which are of particular interest to pathologists are emphasized such as classification and differential diagnosis of neoplasms that occur in the urinary system comparison and significance of toxic effects of substances in animals and humans and similarities and differences in disease manifestations between animals and humans      Toxicity Bibliography ,1977

**Genetically Engineered Mice for Cancer Research** Jeffrey E. Green,Thomas Ried,2011-12-08 Genetically engineered mouse models for cancer research have become invaluable tools for studying cancer biology and evaluating novel therapeutic approaches This volume focuses on state of the art methods for generating analyzing and validating such models for studying aspects of human cancer biology Additionally these models are emerging as important pre clinical systems in which to test cancer prevention and therapeutic strategies in order to select compounds for testing in clinical trials
