**Advancing Federal Sector Health Care** Peter Ramsaroop, Marion J. Ball, David Beaulieu, Judith V. Douglas, 2013-11-11

As a result of severe wounds received in World War II I have spent many months in military hospitals including 20 months in an Army hospital immediately after the war I continue to use the Military Health System as do many of my colleagues in Congress because I firmly believe the quality of health care delivered in military and veterans hospitals is second to none The largest system of its type in the world the U S military healthcare system is undergoing changes as dramatic as those experienced by the entire country During Desert Storm we saw new technologies such as telemedicine at work in the field Since then military medicine has continued to improve and develop innovations that often focus on healthcare issues of concern to society as a whole We already have seen technology transfer at work Things we use in our everyday lives from sunscreen to the Internet have come to us directly from innovations developed by federal researchers The private sector working with the public agencies has creatively adapted federal research For example the hemopump is used successfully by heart surgeons world wide to save heart patients This device developed by Richard Wampler was based on satellite technology information that was declassified in the early 1980s The chapters in this book focus on current federal sector efforts to shape health care and technology transfer Many of the initiatives described involve some degree of partnering between the public and private sectors

*Cancer Informatics* John S. Silva, Marion J. Ball, Christopher G. Chute, Judith V. Douglas, Curtis Langlotz, Joyce C. Niland, William L. Scherlis, 2002-01-08 *Cancer Informatics* chronicles the development of the National Cancer Institute's new Cancer Informatics Infrastructure CII an information management system infrastructure designed to facilitate clinical trials provide for reliable secure information exchange and improve patient care The book details the challenges involved in creating and managing such a knowledge base including technologies standards and current state of the art applications The ultimate goal of CII is to function as an enabler of clinical trials expediting the clinical trials lifecycle facilitating faster and safer drug development and more appropriate treatment choices for cancer patients Contributors address the role the CII must play in converting the growing knowledge of genes proteins and pathways into appropriate preventative diagnostic and therapeutic measures Presented in four sections the first provides an overview of the processes involved in moving the infrastructure for cancer from theory into practice Sections two through four offer the latest work done in the areas of technology cancer specific and national standards and applications to facilitate clinical trials

**Teaching Mental Health** Theo Stickley, Thurstine Basset, 2007-04-30 Mental health service users and carers are increasingly involved in the planning and delivery of a mental health education that gives a real life perspective to the practice of mental health care Teaching and Learning about Mental Health is designed to teach and train new mental health workers using an interdisciplinary approach Divided into three parts the first discusses learning from service users the second looks at innovative practices in teaching and learning and the final part examines several approaches in teaching

and learning all illustrated with examples      Person-Centered Health Records Gary A. Christopherson, 2005-03-03 Divided into three sections for easy use including examples from person centered systems already in place in the US Editors have brought together contributors from varied health care sectors in the United States and elsewhere public and private not for profit and for profit      **Evaluation Methods in Biomedical Informatics** Charles P. Friedman, Jeremy Wyatt, 2005-10-20 Heavily updated and revised from the successful first edition Appeals to a wide range of informatics professionals from students to on site medical information system administrators Includes case studies and real world system evaluations References and self tests for feedback and motivation after each chapter Great for teaching purposes the book is recommended for courses offered at universities such as Columbia University Precise definition and use of terms      *Trauma Informatics* Kimball I. Maull, Jeffrey S. Augenstein, 1998-03-16 Information and the technology to rapidly transmit analyze document and disperse this information are increasing arithmetically if not logarithmically Arguably no discipline better exemplifies this trend than medicine It can be further argued that care of the trauma patient is one of the better examples of informatics and the potential benefit to the health professionals who care for these patients Maull and Augenstein have provided us with a primer on informatics and its use in trauma care The subject matter is timely and covers the gamut of trauma care from prehospital to rehabilitation Who will benefit from trauma informatics A simple answer would be anyone who takes care of trauma patients From a broader perspective however at least three examples illustrate how trauma informatics can be used today to exert a positive effect on patient outcome The first example is care of combat casualties including battlefield resuscitation evacuation acute care and ultimate return to the continental United States Current technology is such that via global positioning satellite a corpsman could transmit to a remote area the vital signs and pertinent physical findings of a combat casualty Furthermore the location of the corpsman and the casualty would be precisely known and consultation and destination disposition would be possible The injured person when admitted to a combat support hospital could be continuously monitored and additional remote consultation obtained      **Medical Informatics** G. Wiederhold, Edward H. Shortliffe, L.M. Fagan, Leslie E. Perreault, 2013-11-11 This series is directed to healthcare professionals who are leading the transformation of health care by using information and knowledge Launched in 1988 as *Computers in Health Care* the series offers a broad range of titles some addressed to specific professions such as nursing medicine and health administration others to special areas of practice such as trauma and radiology Still other books in the series focus on interdisciplinary issues such as the computer based patient record electronic health records and networked healthcare systems Renamed *Health Informatics* in 1998 to reflect the rapid evolution in the discipline now known as health informatics the series continues to add titles that contribute to the evolution of the field In the series eminent experts serving as editors or authors offer their accounts of innovations in health informatics Increasingly these accounts go beyond hardware and software to address the role of information in influencing the transformation of healthcare

delivery systems around the world The series also increasingly focuses on peopleware and the organizational behavioral and societal changes that accompany the diffusion of information technology in health services environments *Introduction to Clinical Informatics* Patrice Degoulet, Marius Fieschi, 2012-12-06 Introduction to Clinical Informatics fills a void in the Computer in Health Care series With this volume Patrice Degoulet and Marius Fieschi provide a comprehensive view of medical informatics and carry that concept forward into the realm of clinical informatics The authors draw upon their experiences as medical school faculty members in France where informatics has long been integrated into the curriculum and where the French version of this very book has been used tested and revised In intent and content this volume stands as the companion volume to Introduction to Nursing Informatics one of the series best selling titles For practitioners and students of medicine pharmacy and other health professions Introduction to Clinical Informatics offers an essential understanding how computing can support patient care clarifying practical uses and critical issues Today medical schools in the United States are making informatics a part of their curriculum with required medical informatics blocks at the onset of training serving as the base for problem based learning throughout the course of study In an increasingly networked and computerized environment health care providers are having to alter how they practice Whether in the office the clinic or the hospital health care professionals have access to a growing array of capabilities and tools as they deliver care Learning to use these becomes a top priority and this volume becomes a valuable resource **Behavioral Healthcare Informatics**

Naakesh A. Dewan, Nancy M. Lorenzi, Robert T. Riley, Sarbori R. Bhattacharya, 2014-03-14 This book will provide an overview of the state of the art in behavioral health care informatics as well as discussing the challenges on the horizon such as organizational issues human centered issues educating healthcare executives about technology issues educating clinicians about behavioral informatics systems and consumer issues In addition to significant contributions by the editors the book will contain contributions from a small number of acknowledged experts within their respective fields As daily living becomes more stressful socio psychological or behavioral related problems become more intense Informatics has the potential to transform the world of behavioral practitioners to enable them to assist people more easily This book will focus on informatics related topics that all disciplines connected to the behavioral health will find very useful for their day to day practice

*Organizational Aspects of Health Informatics* Nancy M. Lorenzi, Robert T. Riley, 2013-06-29 It has become obvious in recent years that successfully introducing major new systems into complex medical organizations requires an effective blend of good technical and organizational skills The technically best system may be woefully inadequate if its implementation is resisted by people who have low psychological ownership in that system On the other hand people with high ownership can make a technically mediocre system function fairly well ORGANIZATIONAL ASPECTS OF HEALTH INFORMATICS focuses on both the successful strategies for implementation of information systems with medical organizations and also on effective management strategies for the altered organization once the new systems are in place
