**Children's Nursing E-Book** Ethel Trigg, Toby Mohammed, Louise Ford, Hermione Montgomery, Vicky Vidler, 2010-06-17 The

skills required by children's nurses are many and varied and are undertaken in a variety of settings. Sick children are cared for at home in children's units and hospitals and sometimes in adult wards. In addition, children with disabilities may need nursing care while at special schools or in residential settings. This book provides a clinical manual of common practices. Each practice is research based and presented in a common format which covers Objectives, Rationale, Factors to note, Guidelines, Positioning, Equipment, Method, Special observations and possible complications, References and further reading. The guidelines have been written specifically for children's nursing by contributors from well known children's units. They are not simply adaptations from adult practices and therefore recognise the unique differences between adult and children's nursing. The introductory section covers common concepts and infection control. There is also a chapter on complementary therapies and an appendix on the use of play as a distraction. All hospital and community nurses dealing with children, whether at home in specialised units or in community settings, will find the book of great practical help. The common format of each practice makes the book easy to use and refer to in a clinical setting. Each practice is based on the latest research to ensure it is evidence based and up to date. Introductory chapters cover issues common to all practices to make the book easier to use. The appendix on play reinforces its common usage as a distraction technique. A chapter on complementary therapies explains these as they are becoming more widespread. All practices have been reviewed by regional centres to avoid parochialism. Content reorganised to reflect the Essential Skills Clusters from the NMC. New chapter on communicating with children. All chapters updated to reflect the current evidence base.

**Healing by Hand** Servando Z. Hinojosa, Kathryn S.

Oths, 2004-10-17 Anthropologists have routinely overlooked the practice of body therapists, one of the primary providers of traditional medicine. *Healing by Hand* presents the first cross cultural primer on manual medicine studies. As a particular modality of healing, manual medicine has reached a high level of popularity and importance as its practitioners investigate the body's important capacities for self healing. The authors describe how manual medicine takes numerous forms across the world's communities in urban and rural as well as Western and non Western contexts in individual and community lives. Though frequently overshadowed and challenged by allopathic practitioners, body workers continue to help the sick and injured reach their health goals. In this book, the individual ethnographic analyses of manual medicine describe beliefs and practices about healing physical and psychological states and the relation between culture and health. Given the therapeutic training of many of the authors, *Healing by Hand* should be a fascinating resource for manual practitioners of western medicine including massage therapists, physical therapists, chiropractors and osteopaths as well as those with traditional training. It is especially recommended for various courses such as Medical Anthropology, Health and Human Culture, Technology and the Developing World, Sociology of Health, International Health and Health Care Systems.
