Patient Data Management in Intensive Care Kurt Lenz,Philipp G.H. Metnitz,2012-12-06 Recent technological innovations influenced primarily by the development of more sophisticated faster and cheaper computer systems permitted also the evolution of more affordable systems for Patient Data Management so called PDM Systems The experience of the authors on one of the first PDMS installation sites in Europe shows that the purchase of such a system is not an easy task since accurate data are not available in a comparable format Therefore the first part of the book is devoted to a comparison of already installed commercially distributed bedside based PDMS with regard to their specifications functions and performance The methods included a questionnaire with detailed questions for the vendors to answer and a table of functions comparing the most important functions which should be included in a PDMS With that list the different systems which were all in clinical use were checked for the availability and the way of use of these functions To evaluate variations in the systems performance an information retrieval test was designed and executed In the second part the different vendors whose systems were included in the study were to describe the systems from their viewpoints The third part contains papers describing the users experiences The fourth and last part shows how to use PDMS data for scientific and therapeutic purposes including two papers on clinical expert systems Thus this book provides valuable information for clinicians and hospital managers who have to decide on the purchase of a Patient Data Management System *Quality Management in Intensive Care* Bertrand Guidet,Andreas Valentin,Hans Flaatten,2016-02-15 One of the first comprehensive summaries of the latest thinking and research in improving intensive care quality and patient safety *Computing and Monitoring in Anesthesia and Intensive Care* Kazuyuki Ikeda,Matsuyuki Doi,Tomie Kazama,Kazuo Sato,Tsutomu Oyama,2012-12-06 In April of 1991 425 participants from 18 countries met in Hamamatsu in Japan for the 6th International Symposium on Computing in Anesthesia and Intensive Care ISCAIC The meeting was one of the most spectacular academic and fruitful in the history of ISCAIC We had four days of fascinating presentations and discussions covering many areas of technology in Anesthesia and intensive care New technologies were presented and old technology reexamined The measures of success of the meeting were the excellent research material in oral and poster presentations and state of the art reviews of the latest issues by distinguished worldwide key speakers It must be sure that the meeting was most effective to promote and disseminate up to date information in these fields across the participating countries The aim of this book is to record the exciting achievements of the meeting and extend them further among our colleagues We hope the readers of this book will share the same excitement as well as the latest information in this speciality Finally we would like to extend our deepest gratitude to all participants and others for the contribution to the compilation of this book Kazuyuki Ikeda M D **The Intensive Care Unit Manual** Paul N. Organisation and Management of Intensive Care D. Reis Miranda,D.W. Ryan,Wilmar Schaufeli,V. Fidler,2012-12-06 From the viewpoint of a health economist the intensive care unit leU is a particularly fascinating phenomenon It is the epitome of high tech medicine and frequently portrayed as the place where life saving miracles are routinely wrought But the popular imagination is also caught up in the darker side when agonizing decisions have to be made to avoid futile and inhuman continuation of expensive treatments My analytical interests led me to approach these issues by asking what the evidence tells us about which leu activities are very beneficial in relationship to their costs and which are not This quickly translates into a slightly different question namely which patients are most appropriately treated in an leu and which not Unfortunately it is very hard to answer these questions because it has proved very difficult to investigate these issues in the manner which is now regarded as the gold standard namely by conducting randomized clinical trials or alternative courses of action I think this is a pity and I am not at all convinced that it would be unethical to do so in many cases because there is wide variation in practice and genuine doubt as to which practices are best the two conditions that need to be fulfilled before such a trial is justifiable

Databases for Cardiology G.T. Meester, F. Pinciroli, 2012-12-06 A database is in principle just a large collection of related or separate data systematically stored in a computer It should be possible for the data to be easily entered into the database structure and afterwards also easily read corrected and processed The later analysis of data from such a database is greatly enhanced by the availability of special query languages and statistical analysis programs not only for serial items but also for large combinations of data Query languages such as SQL Structured Query Language developed especially for these purposes make databases easily accessible also to researchers who may not be very well versed in computer programming The cardiological medical clinician and researcher of today is of necessity confronted more and more with computer based data storage Interest is of course focused primarily on the clinical use of such databases more than on the technical design itself except for some very specific personalized applications For the latter approach there are at present many software packages commercially available especially designed for use in the personal computer environment This book is comprised out of a number of contributions by various authors with differing backgrounds and from many different countries The editors being a cardiologist and an information scientist have strived to achieve an equilibrium between these two fields The chapters in this book form a cross
