Earth **New Guide to the Moon** Patrick Moore,1953 *The Craters of the Moon* Patrick Moore,Peter John Cattermole,1967 **A Survey of the Moon** Patrick Moore,1963 The Sun and Moon Patrick Moore,1995 This book introduces the sun and the moon in the sky including their movements and their characteristics The Moon Bill Leatherbarrow,2018-05-15 The moon has always been the most obvious feature in our night sky It is our nearest celestial neighbour orbiting the earth at an average distance of 384 400 kilometers and is large enough to display significant detail even to the unaided eye Our moon has drawn observers since the dawn of humankind and all people have tried to make sense of the puzzles it poses and the questions it raises The moon provided our ancient ancestors with one of the earliest means of keeping and measuring time and many early religions had cults that worshipped it When it eclipses the sun it provides one of the most awe inspiring views in nature In *The Moon* celebrated amateur astronomer Bill Leatherbarrow provides expert insight into the history of our study of this compelling astronomical body Drawing on his own decades of lunar observation he describes how and why the observation and study of the moon has evolved particularly in the age of telescopic study He also offers an overview of current scientific thinking and developments in lunar science since the advent of the Space Age even providing practical advice on how to make your own observations of the moon Extensively illustrated with images of the lunar surface taken both from spacecraft and using amateur equipment this book is an accessible introduction to complex astrophysical concepts that will give all amateur astronomers and anyone fascinated by this natural satellite something to moon over **The Space Age Generation** William Sheehan,Klaus R. Brasch,2024-03-05 In 1957 Sputnik launched toward the stars President Kennedy then announced that the United States would send men to the Moon and then return them to Earth These pivotal moments sparked an unequalled bound forward in human innovation and scientific exploration At the heart of this momentous time were the men and women working behind the scenes Scientists historians and astronomers share their memories and contributions from this unparalleled era in essays told in their own words They are the remarkable generation who witnessed and contributed to some of space science s most stunning achievements Here they have recorded their memories their childhood inspirations their challenges failures and triumphs for future generations A unique and authoritative record of a momentous period in human history The Space Age Generation highlights the golden age of space exploration and the people who made it happen Contributors Leo Aerts Alexander Basilevsky Klaus Brasch Clark R Chapman Dale P Cruikshank William K Hartmann William Leatherbarrow Baerbel Koesters Lucchitta Yvonne Pendleton Peter H Schultz William Sheehan Paolo Tanga Charles A Wood *THE MAN FROM THE DIOGENES CLUB* Kim Newman,2017-12-26 CAN T ELIMINATE THE IMPOSSIBLE Send for the man from the Diogenes Club The debonair psychic investigator Richard Jeperson is the Most Valued Member of the Diogenes Club the least known and most essential branch of British Intelligence While foiling the plot of many a maniacal mastermind he is chased by sentient snowmen and Nazi zombies investigates an unearthly murderer stalking the sex shops of 1970s Soho and battles a poltergeist to prevent it triggering nuclear

Who's Who In The Moon Brian Jones,2024-12-30 Who s Who in the Moon is aimed not only at the beginner or near beginner but also at the backyard astronomer who is perhaps experienced in other areas of observation but who has decided to spend more time considering the Moon as an alternative target The book provides a visual introduction to our closest celestial neighbor opening with an introductory section which details both with the history of lunar mapping and naming of lunar formations as well as providing useful information on observing the lunar surface and what observers can realistically expect to see when they look at the Moon with the naked eye binoculars or a small medium telescope The introductory section is followed by a lengthy series of images including not only wide field panoramic views but also a large number of more detailed images showing close up views of different areas of the Moon and featuring individual craters mountains valleys and much more Many of the individual features shown on these images are identified by name and are accompanied by biographical sketches relating to the men and women after whom they are named This is a non technical up close and personal visual look at the Earth s only natural satellite and many of the individual features scattered across its surface Rather than offering itself as a full and exhaustive guide to the lunar surface A Guide to the Moon is more of a vade mecum which enables and hopefully encourages the reader to become more acquainted with the lunar landscape on a personal level with a view to learning more about the astronomers and other scientists whose names are immortalised by having lunar features named after them Who s Who in the Moon was inspired by and is a tribute to a Memoir published by the British Astronomical Association BAA in 1938 entitled Who s Who in the Moon written by Mary Evershed the first Director of the BAA Historical Section The biographical notes in A Guide to the Moon include examples of those penned by Mary Evershed in her original publication

The Telescopic Tourist's Guide to the Moon Andrew May,2017-06-29 Whether you re interested in visiting Apollo landing sites or the locations of classic sci fi movies this is the tourist guide for you This tourist guide has a twist it is a guide to a whole different world which you can visit from the comfort of your backyard with the aid of nothing more sophisticated than an inexpensive telescope It tells you the best times to view the Moon the most exciting sights to look out for and the best equipment to use allowing you to snap stunning photographs as well as view the sights with your own eyes Have you ever been inspired by stunning images from the Hubble telescope or the magic of sci fi special effects only to look through a small backyard telescope at the disappointing white dot of a planet or faint blur of a galaxy Yet the Moon is different Seen through even a relatively cheap scope it springs into life like a real place with mountains and valleys and rugged craters With a bit of imagination you can even picture yourself as a sightseeing visitor there which in a sense you are

Moon Flight Atlas: Patrick Moore ,1970 Who Said the Mechanics of Essay Writing Can't Be Fun? Francis A. Andrew,2018-10-04 This book is essentially a sequel to Francis A Andrew s earlier book

Who Said English Grammar Was Boring The sequel begins by devoting a few chapters to some grammar points and continues with explanations and examples of twenty three essay types As well as example essays each unit provides reading passages which are unrelated to the essay type The reason for this is to encourage students to read widely and thus to see reading and writing as interconnected and inter related skills

Observing the Moon Peter T. Wlasuk, 2013-04-17 Why write another guide to observing the Moon That was the question I was pondering as I began this project having a fine collection of classic lunar guidebooks dating back to 1791 in my own library As a Fellow of the Royal Astronomical Society RAS member of the American Astronomical Society's Division for Planetary Sciences AAS DPS and member of the American Geophysical Union AGU I am fortunate to know many professional lunar scientists who keep me up to date with developments in lunar science contrary to public perception lunar science has definitely not stagnated since the last Apollo No 17 left the surface of the Moon in December 1972 I am also lucky to know many amateur lunar observers who like me enjoy actually looking at the Moon with telescopes and imaging it with a wide variety of devices ranging from regular 35 mm cameras to video recorders and CCD cameras My friends who study the Moon whether in their professions or just for fun gave me several reasons for doing another lunar guidebook First the last lunar observer's guide of any length was published over ten years ago and many reviewers noted that it was badly out of date even then
