Machine Learning of Natural Language David M.W. Powers, Christopher C.R. Turk, 2012-12-06 We met because we both share the same views of language Language is a living organism produced by neural mechanisms relating in large numbers as a society Language exists between minds as a way of communicating between them not as an autonomous process The logical rules seem to us an epiphenomena of the neural mechanism rather than an essential component in language This view of language has been advocated by an increasing number of workers as the view that language is simply a collection of logical rules has had less and less success People like Yorick Wilks have been able to show in paper after paper that almost any rule which can be devised can be shown to have exceptions The meaning does not lie in the rules David Powers is a teacher of computer science Christopher Turk like many workers who have come into the field of AI Artificial Intelligence was originally trained in literature He moved into linguistics and then into computational linguistics In 1983 he took a sabbatical in Roger Shank's AI project in the Computer Science Department at Yale University Like an earlier visitor to the project John Searle from California Christopher Turk was increasingly uneasy at the view of language which was used at Yale

Systems Thinking for a Turbulent World Anthony Hodgson, 2019-11-05 Systems Thinking for a Turbulent World will help practitioners in any field of change engage more effectively in transformative innovation Such innovation addresses the paradigm shift needed to meet the diverse unfolding global challenges facing us today often summed up as the Anthropocene Fragmentation of local and global societies is escalating and this is aggravating vicious cycles To heal the rifts we need to reintroduce the human element into our understandings whether the context is civic or scientific and strengthen truth seeking in decision making Aided by appropriate concepts and methods this healing will enable a switch from reaction to anticipation even in the face of discontinuous change and high uncertainty The outcome is to privilege the positive human skills for collaborative navigation through uncertainty over the disjointed rationality of mechanism and artificial intelligence which increasingly alienates us The reader in search of new ways of thinking will be introduced to concepts new to systems thinking that integrate systems thinking and futures thinking The concept of anticipatory present moment APM serves as a basis for learning the cognitive skills that better enable navigation through turbulent times A key personal and team practice is participative repatterning which is the basis for transformative innovation This practice is aided by new methods of visual facilitation The reader is guided through the unfolding of the ideas and practices with a narrative based on the metaphor of search portrayed in the tradition of ox herding found in traditional Far Eastern consciousness practice

Playful STEAM

Learning in the Early Years Amanda Sullivan, Amanda Strawhacker, Decades of research has shown that introducing STEM content like coding and engineering during the foundational early childhood years can lead to many benefits such as

improving children's number sense problem solving skills and sequencing ability Unfortunately the costs of STEM technologies can be a barrier for many early childhood educators Additionally many digital tools and apps are not playful or developmentally appropriate for young learners and can be less inclusive of students who have been historically excluded from STEM This book addresses these barriers by demonstrating how to leverage an interdisciplinary STEAM Science Technology Engineering Arts and Mathematics approach to pique the curiosity of young students through play based learning The authors provide evidence based hands on approaches as well as a practical framework to effectively integrate STEAM learning in the early grades pre K to third grade Readers will explore new ways to play alongside their young learners to make powerful STEAM discoveries and foster a lifelong love of learning Book Features Provides tips and strategies rooted in existing frameworks and guidelines as well as the authors original research on the cognitive and socioemotional benefits of STEAM experiences Empowers early childhood educators working in any setting informal formal or home settings Describes a new framework for the equitable design and implementation of play based STEAM learning in early childhood settings

Vision and Mind Vadim D. Glezer, 2013-05-13 The usual method for studying mental processes entails taking words in linguistics or concepts in logic and establishing the connections and relationships between them Thus the traditional approach to semantic problems those of meaning and understanding is through language Most researchers agree that thought and language are generated by deep seated semantic structures determined by the structure of the brain Until now however all attempts at constructing semantic models have been made on the basis of linguistic material alone without taking brain structure into account Analysis of these models shows them to be as inadequate as those based on the method of the black box This book approaches the problem of the organization of higher psychological functions a different way by analyzing the functional organization of the neural structures that gradually form universal categories from raw sensory material At the higher levels of the brain's operation these universals correspond to the basic categories of thought and language The visual system provides rewarding material for such an approach both because it is relatively well researched and because it is the main source of sensory information in humans With this in mind this monograph examines the whole process of the transformation and description the coding of visual information The most important aspect of this process is the transition from the description of visual space to the description of individual objects and the relationships between them This transition is made possible by the existence in the visual system of various mechanisms that developed during evolution as a result of environmental influences Written for a wide circle of investigators in disciplines associated with different aspects of the functioning of the brain physiologists and psychologists this book is also of importance to engineers and mathematicians working on the problems of artificial intelligence and linguists and philosophers interested in the deep structures that form the universals of thought and language
