The Ancestry of Regional Spatial Planning Louis C. Wassenhoven, 2018-09-20 This book is not a historical or archaeological treatise but rather a study in which the author looks at the past not as a historian but as a planner who has the ambition to unravel the early manifestations of his discipline a discipline which did not exist as such in remote periods but the ingredients of which were nevertheless present The author has observed the past equipped with knowledge and understanding of what regional planning was in the second half of the twentieth century and still is He stands in the period of the first decades after the Second World War which were the formative years of regional planning and looks back at bygone ages He discusses ideas and literature from the immediate post war period in order to examine the ancestry of regional planning through their lens The book will attract a broad range of readers because of its approach and its wide coverage of historical periods and world regions Although Europe is the main focus the book contains material on all continents and all periods the ancient world the medieval age and the modern era The history of Urban Planning is taught and researched widely but the history or pre history before the twentieth century of Regional Spatial Planning is not This book will fill that vacuum

Neural Information Processing: Research and Development Jagath Chandana Rajapakse,Lipo Wang,2012-12-06 The field of neural information processing has two main objects investigation into the functioning of biological neural networks and use of artificial neural networks to solve real world problems Even before the reincarnation of the field of artificial neural networks in mid-nineteen eighties researchers have attempted to explore the engineering of human brain function After the

reincarnation we have seen an emergence of a large number of neural network models and their successful applications to solve real world problems This volume presents a collection of recent research and developments in the field of neural information processing The book is organized in three Parts i e 1 architectures 2 learning algorithms and 3 applications Artificial neural networks consist of simple processing elements called neurons which are connected by weights The number of neurons and how they are connected to each other defines the architecture of a particular neural network Part 1 of the book has nine chapters demonstrating some of recent neural network architectures derived either to mimic aspects of human brain function or applied in some real world problems Muresan provides a simple neural network model based on spiking neurons that make use of shunting inhibition which is capable of resisting small scale changes of stimulus Hoshino and Zheng simulate a neural network of the auditory cortex to investigate neural basis for encoding and perception of vowel sounds

Bayesian Approach to Inverse Problems Jérôme Idier,2013-03-01 Many scientific medical or engineering problems raise the issue of recovering some physical quantities from indirect measurements for instance detecting or quantifying flaws or cracks within a material from acoustic or electromagnetic measurements at its surface is an essential problem of non destructive evaluation The concept of inverse problems precisely originates from the idea of inverting the laws of physics to recover a quantity of interest from measurable data Unfortunately most inverse problems are ill posed which means that precise and stable solutions are not easy to devise Regularization is the key concept to solve inverse problems The goal of this book is to deal with inverse problems and regularized solutions using the Bayesian statistical tools with a particular view to signal and image estimation The first three chapters bring the theoretical notions that make it possible to cast inverse problems within a mathematical framework The next three chapters address the fundamental inverse problem of deconvolution in a comprehensive manner Chapters 7 and 8 deal with advanced statistical questions linked to image estimation In the last five chapters the main tools introduced in the previous chapters are put into a practical context in important applicative areas such as astronomy or medical imaging

Entrepreneurial Governance in the Neoliberal Era Oliver Cowart,2021-09-30 Against the background of a growing tendency among state and local governments in the United States to vie against one another spending public funds and foregoing corporate tax revenues in order to attract private investment this book offers an analysis of local economic development and business recruitment in the automotive industry Asking why localities felt they could and more importantly should make deals with private capital in the first place this book examines the shift toward entrepreneurial local governance from a global and historically informed perspective Through a study of the 19 greenfield automotive assembly plants constructed in the United States during the neoliberal era the author draws on

interviews with corporate and government elites to chart the connections between increasingly global competitive industry pressures and changing attitudes toward incentivizing private investment Studying the development of an approach that has partially reoriented local governments away from managing localities and towards helping manage transnational capital flows by absorbing some of the increasing risk of long term capital investment Entrepreneurial Governance in the Neoliberal Era will appeal to scholars of sociology politics and urban studies with interests in globalization the sociology of work and industry the sociology of development and neoliberal governance

Becoming a Woman and Mother in Greco-Roman Egypt Ada Nifosi, 2019-01-30 How did Greco Roman Egyptian society perceive women s bodies and how did it acknowledge women s reproductive functions Detailing women s lives in Greco Roman Egypt this monograph examines understudied aspects of women s lives such as their coming of age social and religious taboos of menstruation and birth rituals It investigates medical legal and religious aspects of women s reproduction using both historical and archaeological sources and shows how the social status of women and new born children changed from the Dynastic to the Greco Roman period Through a comparative and interdisciplinary study of the historical sources papyri artefacts and archaeological evidence **Becoming a Woman and Mother in Greco Roman Egypt** shows how Greek Roman Jewish and Near Eastern cultures impacted on the social perception of female puberty childbirth and menstruation in Greco Roman Egypt from the 3rd century B C to the 3rd century A D
