

capped Research of the USA. It is mainly intended as an overview of issues surrounding the measurement of changes produced by rehabilitation services in the lives of the recipients and their environment. The editor's introductory chapter discusses important concepts of outcome studies and their design, and the choice of appropriate instruments. A large section of the book is concerned with many target disability groups, including persons with multiple sclerosis, severe burns, spinal injuries, blindness, and head injury.

The chapter by Parkas & Anthony gives a clear account of the changing scene of psychiatric rehabilitation outcome research, and it summarises its main problem areas, including sampling, specificity of interventions, length of follow-up, measuring scales, and interpretation of results. These are illustrated by an example from a research project. It is altogether too brief, but it has a useful list of references.

Practical information is given in some of the chapters on the methodological principles and the application of outcome research. The discussions on policy, economics, and co-ordination of agencies are interesting, although they are more pertinent to the American setting.

The book is aimed at professionals specialising in rehabilitation. One of its strengths is that it highlights the common ground of outcome research in the rehabilitation of a variety of disability groups. In a sense, this is also the book's weakness; the wide coverage inevitably precludes the detailed consideration of problem areas in each particular group.

Structured Enrichment Programs for Couples and Families. By LUCIANO L'ABATE and STEVEN E. WEINSTEIN. New York: Raven Press, 1987. 302 pp. \$68.00. **Casebook: Structured Enrichment Programs for Couples and Families.** By LUCIANO L'ABATE and LINDA YOUNG. New York: Raven Press, 1987. 387 pp. \$61.50.

These two tedious volumes describe and illustrate the application of social skills training to healthy couples and families. Structured enrichment is defined as a "highly structured preventative skill - a training course by which family members can become more successful and improve the frequency and quality of their interactions through novel face-to-face interactions".

The first volume details fifty enrichment programs aimed at different aspects of family life and types of family structure. Each of the programs is written by a student on a graduate course in structured enrichment at Georgia State University. Despite the apparently bewildering variety of programs, they all consist of one

of three elements: communications training, problem solving, and information provision.

The second volume is a casebook containing detailed descriptions of 25 cases selected from hundreds seen at the Family Study Centre at Georgia State University. The cases were generally the first experiences in structured enrichment for the graduate students, and in most, one member was a student who participated to earn part of a course credit. The programs are very brief, consisting of an assessment interview and pre-test battery, followed by six sessions, and ending with a post-test battery and feedback conference. Each session is highly structured, with enrichers adhering to their verbatim format as detailed in the first volume.

It is difficult to judge how effective structured enrichment is from these cases. Most families were functioning at a fairly high level initially, so any improvement made was, not surprisingly, marginal. In general, the more nearly the cases approximated to clinical levels, the less obvious were the benefits. As detailed follow-up evaluations were not available, the long-term effects cannot be gauged.

Overall, the reviewer was struck by the therapeutic naivety and inexperience of the enrichers, the rigidity of approach, the superficiality of the interventions, and the total lack of attempts by the enrichers to help families consolidate any lessons learned from the exercises.

For the experienced therapist working with clinical populations these volumes offer no fresh insights or ideas. For novice therapists, structured enrichment unfortunately might provoke a serious aversion to other structured approaches to therapy. These rather expensive volumes cannot be recommended for psychiatric libraries.

Patterns of Improvement in Depressed In-patients (Maudsley Monographs 30). By M. G. LADER, REUBEN A. LANG and GLENN D. WILSON. Oxford: Oxford University Press, 1987. 118 pp. £15.00.

This monograph represents a collaboration between the Departments of Pharmacology and Psychology at the Institute of Psychiatry. Seventy in-patients recovering from primary depressive illnesses were studied at repeated intervals of 2-7 days with mood ratings, psychomotor and cognitive tests, and clinical assessments. This volume documents the search for sequential patterns in the ensuing data. It must be read by anyone who believes that the process of recovery in depression can be explained by one simple theoretical paradigm.

Very few features of the depressive state are found to proceed hand in hand. Variability and unpredictability, both within symptom profiles, from patient to patient, and from day to day, emerge as the predominant pat-

Late-Life Depression Steven P. Roose, Harold A. Sackeim, 2004-07-15 We live in an aging world Illnesses that are prevalent and cause significant morbidity and mortality in older people will consume an increasing share of health care resources One such illness is depression This illness has a particularly devastating impact in the elderly because it is often undiagnosed or inadequately treated Depression not only has a profound impact on quality of life but it is associated with an increased risk of mortality from suicide and vascular disease In fact for every medical illness studied e g heart disease diabetes cancer individuals who are depressed have a worse prognosis Research has illuminated the physiological and behavioral effects of depression that accounts for these poor outcomes The deleterious relationship between depression and other illnesses has changed the concept of late life depression from a psychiatric disorder that is diagnosed and treated by a psychiatrist to a common and serious disorder that is the responsibility of all physicians who care for patients over the age of 60 This is the first volume devoted to the epidemiology phenomenology psychobiology treatment and consequences of late life depression Although much has been written about depressive disorders the focus has been primarily on the illness as experienced in younger adults The effects of aging on the brain the physiological and behavioral consequences of recurrent depression and the impact of other diseases common in the elderly make late life depression a distinct entity There is a compelling need for a separate research program specialized treatments and a book dedicated to this disorder This book will be invaluable to psychiatrists gerontologists clinical psychologists social workers students trainees and others who care for individuals over the age of sixty
