Paul Ehrlich's Receptor Immunology The Magnificent Obsession:

Paul Ehrlich's Receptor Immunology Arthur M. Silverstein, 2001-11-17 Paul Ehrlich's Receptor Immunology The Magnificent Obsession describes the background to Paul Ehrlich's immunological works and theories and delves into the substance of his experiments in great detail. By exploring these early developments in immunology, the book lays the foundation for modern concepts, providing immunologists, biomedical researchers, and students the context for the discoveries in their field. The selectionist theory of antibody formation, Kinetics of primary and secondary antibody response, Quantitative methods of measurement of antigens and antibody, Demonstration of passive transfer of immunity from mother to foetus.

A History of Immunology Arthur M. Silverstein, 2009-06-17 In this innovative short new textbook, Rod Langman offers a conceptual framework within which students can understand the evolution of the immune system. Evolutionary selection for resistance to infectious disease is shown to be the driving force that has shaped the immune system into a remarkably effective and efficient system of defense. In the midst of the current information explosion in immunological science, when many students are under the impression that the immune system is almost too complex to understand as a whole, The Immune System can be used alone as a text for an introductory course or used in conjunction with any of the several descriptive texts already on the market.

Five Quarts Bill B. Hayes, 2006-02-14 This beguiling brew of fascinating scientific facts and illuminating poignant anecdotes makes Five Quarts something like blood itself: vital and pulsing with energy. Entertainment Weekly From ancient Rome, where gladiators drank the blood of vanquished foes to gain strength and courage, to modern-day laboratories where machines test blood for diseases and scientists search for elusive cures, Bill Hayes takes us on a whirlwind journey through history, literature, mythology, and science by way of the great red river that runs five quarts strong through our bodies. Hayes also recounts the impact of the vital fluid in his daily life, from growing up in a household of five sisters and their monthly cycles to his enduring partnership with an HIV-positive man. As much a biography of blood as it is a memoir of how this rich substance has shaped one man's life, Five Quarts is by turns whimsical and provocative, informative and moving.

Biomedicine in the Twentieth Century Caroline Hannaway, Victoria Angela Harden, 2008 Biomedicine in the Twentieth Century: Practices, Policies, and Politics is a testimony to the growing interest of scholars in the development of the biomedical sciences in the twentieth century and to the number of historians, social scientists, and health policy analysts now working on the subject. The book is comprised of essays by noted historians and social scientists that offer insights on a range of subjects that should be a significant stimulus for further historical investigation. It details the NIH's practices, policies, and politics on a variety of fronts, including the development of the intramural program, the National Institute of Mental Health and mental health policy, the politics and funding of heart transplantation, and the initial focus of the National Cancer Institute. Comparisons can be made with the development of other American and British institutions involved in medical research, such as the Rockefeller Institute and the Medical Research

Council Discussions of the larger scientific and social context of United States federal support for research the role of lay institutions in federal funding of virus research the consequences of technology transfer and patenting the effects of vaccine and drug development and the environment of research discoveries all offer new insights and suggest questions for further exploration

Cathedrals of Science Patrick Coffey,2008-08-29 In *Cathedrals of Science* Patrick Coffey describes how chemistry got its modern footing how thirteen brilliant men and one woman struggled with the laws of the universe and with each other They wanted to discover how the world worked but they also wanted credit for making those discoveries and their personalities often affected how that credit was assigned Gilbert Lewis for example could be reclusive and resentful and his enmity with Walther Nernst may have cost him the Nobel Prize Irving Langmuir gregarious and charming rediscovered Lewis s theory of the chemical bond and received much of the credit for it Langmuir s personality smoothed his path to the Nobel

Prize over Lewis Coffey deals with moral and societal issues as well These same scientists were the first to be seen by their countries as military assets Fritz Haber dubbed the father of chemical warfare pioneered the use of poison gas in World War I vividly described and Glenn Seaborg and Harold Urey were leaders in World War II s Manhattan Project Urey and Linus Pauling worked for nuclear disarmament after the war Science was not always fair and many were excluded The Nazis pushed Jewish scientists like Haber from their posts in the 1930s Anti-Semitism was also a force in American chemistry and few women were allowed in Pauling for example used his influence to cut off the funding and block the publications of his rival Dorothy Wrinch Cathedrals of Science paints a colorful portrait of the building of modern chemistry from the late 19th to the mid 20th century Healthcare in Private and Public from the Early Modern Period to 2000 Paul

Pharmaceuticals Viviane Quirke,Judy Slinn,2010 One of the most striking features of the twentieth century has been the rapid growth of the pharmaceutical industry and the large increases in the use and consumption of its products This trend began in the first half of the century but accelerated most sharply after the Second World War when the creation of national systems of healthcare created mass markets for drugs The industry then assumed a major economic social and political significance and became one of the most highly regulated sectors of the economy attracting the attention of industry analysts as well as academics This volume brings together a collection of papers exploring and reflecting upon some of the significant strands in the current studies of pharmaceuticals in the twentieth century They touch upon many of the issues that are matters of concern and debate today and their international and multidisciplinary approaches enrich our understanding of an object of an industry and of a process that are at the heart of our highly medicalized contemporary societies Allergy Mark

Films that dramatize historical events and the lives of historical figures whether they are intended to educate or to entertain

play a significant role in shaping the public's understanding of the past. In *A Biographical Encyclopedia of Scientists and Inventors in American Film and TV since 1930*, A. Bowdoin Van Riper focuses on the dramatized portrayals of a particular group of historical figures: scientists, engineers, and inventors that have appeared on American film and television screens. This volume analyzes individual portrayals, the public images of particular scientists and inventors, and the ideas about science and technology that collectively they represent. In this first in-depth study of how historic scientists and inventors have been portrayed on screen, Van Riper catalogs nearly 300 separate performances and includes essays on the screen images of more than 80 historic scientists, inventors, engineers, and medical researchers. The individuals covered include Isaac Newton, Benjamin Franklin, Thomas Edison, Albert Einstein, Marie Curie, Dian Fossey, and Bill Gates. Arranged chronologically by the subject's date of birth, entries for each individual explain their major contributions to science and technology, analyze the ways in which they've been portrayed in film and on television, and conclude with a complete list of screen portrayals and a discussion of suggestions for further reading. *A Biographical Encyclopedia of Scientists and Inventors in American Film and TV since 1930* will be of interest to anyone concerned with the depiction of historical events and historical figures in film and television, and to anyone interested in the public understanding of science and technology.

The War of the Soups and the Sparks, Elliot S. Valenstein, 2005-07-15. Like the cracking of the genetic code and the creation of the atomic bomb, the discovery of how the brain's neurons work is one of the fundamental scientific developments of the twentieth century. The discovery of neurotransmitters revolutionized the way we think about the brain and what it means to be human, yet few people know how they were discovered, the scientists involved, or the fierce controversy about whether they even existed. *The War of the Soups and the Sparks* tells the saga of the dispute between the pharmacologists who had uncovered the first evidence that nerves communicate by releasing chemicals and the neurophysiologists, experts on the nervous system, who dismissed the evidence and remained committed to electrical explanations. The protagonists of this story are Otto Loewi and Henry Dale, who received Nobel Prizes for their work, and Walter Cannon, who would have shared the prize with them if he had not been persuaded to adopt a controversial theory. How that happened is an important part of this history. Valenstein sets his story of scientific discovery against the backdrop of two world wars and examines the fascinating lives of several scientists whose work was affected by the social and political events of their time. He recounts such stories as Loewi's arrest by Nazi storm troopers and Dale's efforts at helping key scientists escape Germany. *The War of the Soups and the Sparks* reveals how science and scientists work. Valenstein describes the observations and experiments that led to the discovery of neurotransmitters and sheds light on what determines whether a novel concept will gain acceptance among the scientific community. His work also explains the immense importance of Loewi, Dale, and Cannon's achievements in our understanding of the human brain and the way mental illnesses are conceptualized and treated.
