edited papers presented at the annual Review of Progress in Quantitative NDE held at the University of California San Diego July 8 13 1984 We have chosen to organize the papers by subject an arrangement that we feel to be more useful for a reference volume than the order of paper presentation at the Review To do this topical subject headings have been selected under which the large majority of papers reasonably fall These categories cover a broad spectrum of research in NDE and encompass activities from fundamental work to early engineering applications The scope and depth of the Review may be easily assessed by examination of the Table of Contents The Review was sponsored by the Center for Advanced NDE at the Ames Laboratory of the U S Dept of Energy in cooperation with the Office of Basic Energy Sciences USDOE the Materials Laboratory at Wright Patterson AFB and the Naval Sea Systems Command Approximately 300 attendees representing various government agencies industry and universities participated in the technical presentations poster sessions and discussions This Review possibly the most comprehensive annual symposium in NDE provides a valuable forum for the timely exchange of technical information A few highlights of the Review are summarized in the following paragraphs 12th Annual Conference on Composites and Advanced Ceramic Materials, Part 2 of 2, Volume 9, Issue 9/10 John B.

Electromagnetic Nondestructive Evaluation Toshiyuki Takagi,John R. Bowler,Yoshikatsu Yoshida,1997 Eddy current testing is a key technology among electromagnetic non destructive testings at present and this situation was motivated by a stringent need to detect small cracks in tubing of a steam generator of nuclear power plants In these five years the ECT technology has been enhanced very much demonstrating that high performed sensors for ECT are now ready to be applied to the annual inspection of steam generator tubing with use of arrayed micro sensors for ECT In addition to the innovative technology an inversion technique is

being theoretically developed to make reconstruction of defects possible with use of data from the arrayed sensors Rapid growth of interest in electromagnetic nondestructive evaluation have brought together experts from different parts of the world as reflected in this work The book is intended for engineers researchers and practitioners working in the area of electromagnetism **Non-Destructive Testing of Fibre-Reinforced Plastics Composites** J.
