Sørensen,2008 Agricultural water management includes many topics farm level and regional water management irrigation drainage and salinity management of cultivated areas collection and storage of rainfall in relation to soil properties and vegetation the role of groundwater and surface water in nutrient cycling exploitation and protection of water resources control of flooding erosion and desertification This book presents leading edge research from around the world **Land Management and Food/Nutrition (In)Security In Mixed Farming Systems** Ermias Teferi Demessie,Karuturi Venkata Suryabhagavan,Tibebu Kassawmar,Matebu Tadesse,Abebe Shiferaw Dakka,Gizaw Desta,Mirgissa Kaba,2025-03-21 The need to increase agricultural productivity due to the high demand of animal feeding and to provide food for growing global population has placed intense pressure on the agriculture landscape causing land degradation This issue has heavy consequences on smallholder farmers which constitute the majority of the global agricultural community making the access to sustainable nutrition ambitious for many communities Reducing land degradation understanding the process causes and effects and improving the management of natural resources became among the targets of Sustainable Development Goals Nowadays the implementation of context specific and innovative land management practices is a widely recognized solutions to ending land degradation Hurni et al 2010 Despite this it has never been implemented as widely as intended and little is known about their effectiveness in terms of restoring landscapes and boosting food and nutrition security The lack of long term observations and actions contributed to the limited knowledge available about the role of land management practices in food security To this end assessing and documenting the role and effectiveness of land management practices in food security is a relevant and critical research issue that requires appropriate attention This Research Topic aims to collect articles to address i best land management practices in effectively transforming degraded landscapes to food producing landscapes and ii documenting success and failure stories of land management practices in addressing food and nutrition security **Agricultural Reviews and Manuals** ,1979 Role of Mulching in Pest Management and Agricultural Sustainability Khawar Jabran,2019-08-20 This book provides the concepts techniques and recent developments with regard to use of mulches in agriculture utility of mulches for non chemical pest control and sustainability of crop production systems Non conventional means of improving the sustainability of crop production and pest control are required in the wake of environmental concerns over the use of conventional pesticides as well as the intensive use of land resources Mulches have been used in agriculture for various purposes however there has been an increase in

their use more recently and scientists around the world have conducted more research to explore the benefits of mulching in various agricultural systems. Mulches have been found advantageous in non-chemical pest control, soil and water conservation, improving fertility, and improving microbial activities in the soil. While this is a topic of current importance, the information use of mulches in agricultural fields is rarely compiled in one comprehensive location to provide a full account of various aspects of mulches and their utility. This book will be helpful for researchers, growers, and students.

Innovations in Agricultural Water Management Muhammad Mubeen, Wajid Nasim Jatoi, Muhammad Zaffar Hashmi, Mushtaq Ahmad, 2025-08-04. Due to climate change, population growth, and urbanization, competition for water resources is expected to increase, with a particular impact on agriculture. Sustainable water management in agriculture is essential for ensuring food security and environmental protection. Sustainable agricultural water management includes integrated water resources management, the use of water-efficient technologies, and the adoption of water conservation practices. This contributed volume offers background and cases dealing with a variety of ways to sustainably manage water for agriculture in the context of climate change. It investigates the positives and downsides of a variety of approaches, including but not limited to precision agriculture, water harvesting, and wastewater for agricultural purposes. A number of biological and physical sciences, e.g., biotechnology, remote sensing, GIS, and ecohydrology, can be involved for better adoption of innovations in agricultural water management. The book also describes possibilities of cultivars that use less water and detailed techniques for measuring and assessing water quality and quantity.
