Reviews of Environmental Contamination and Toxicology George W. Ware, 2012-12-06 *Reviews of Environmental Contamination and Toxicology* contains timely review articles concerned with all aspects of chemical contaminants including pesticides in the total environment including toxicological considerations and consequences. It attempts to provide concise critical reviews of advances, philosophy and significant areas of accomplished or needed endeavor in the total field of residues of these and other foreign chemicals in any segment of the environment as well as toxicological implications.

Reviews of Environmental Contamination and Toxicology, 2006 *Reviews of Environmental Contamination and Toxicology* Dr. George W. Ware, 2001-06-27 *Reviews of Environmental Contamination and Toxicology* provides detailed review articles concerned with aspects of chemical contaminants including pesticides in the total environment with toxicological considerations and consequences. *Reviews of Environmental Contamination and Toxicology* George W. Ware, Herbert N. Niggs, Arthur Bevenue, 2012-12-06 International concern in scientific industrial and governmental communities over traces of xenobiotics in foods and in both abiotic and biotic environments has justified the present triumvirate of specialized publications in this field: comprehensive reviews, rapidly published research papers and progress reports and archival documentations. These three international publications are integrated and scheduled to provide the coherency essential for non-duplicative and current progress in a field as dynamic and complex as environmental contamination and toxicology. This series is reserved exclusively for the diversified literature on toxic chemicals in our food, our feeds, our homes, recreational and working surroundings, our domestic animals, our wildlife and ourselves. Tremendous efforts worldwide have been mobilized to evaluate the nature, presence, magnitude, fate and toxicology of the chemicals loosed upon the earth. Among the sequelae of this broad new emphasis is an undeniable need for an articulated set of authoritative publications where one can find the latest important world literature produced by these emerging areas of science together with documentation of pertinent ancillary legislation. Research directors and legislative or administrative advisers do not have the time to scan the escalating number of technical publications that may contain articles important to current responsibility. Rather, these individuals need the background provided by detailed reviews and the assurance that the latest information is made available to them all with minimal literature searching.
