Jean-Francois, 2020-07-17 **Diatom Ecology** Nora I. Maidana, Magdalena Licursi, Eduardo Morales, 2024-10-08 This book offers a comprehensive unique and up to date exploration of diatom ecology spanning from fundamental molecular aspects to the intricate dynamics of metacommunities In recent years there has been a considerable increase in the amount of research devoted to diatom ecology with a wide spectrum of approaches This large amount of information published in many different journals and books makes it very difficult to keep up to date both for the trained researcher and for students Eduardo A Morales d May 2023 had the original idea to assemble chapters on various subjects within diatom ecology The questions he posed to potential contributors framed the current book consisting of 12 chapters Are diatoms suitable tools for ecological restoration What would be the features that make them reliable in this context What makes diatoms ecologically successful In an ecological sense why is there such variability in diatom reproductive strategies and why are they worth considering What do new approaches in ecological synthesis provide to diatom ecology biogeography and metacommunities Are all diatoms widely spread and each species uniquely characterized by its own unaltered phenotype Can we really make any

ecological consideration without knowing with a high degree of certainty the identity of taxa Are urban ecosystems important repositories of biodiversity What are the benefits and the progress in diatom ecology made by the diatom guild perspective Why how and when are soil diatoms used in bioindication and what are the benefits of such an approach Are diatoms bona fide indicators of climate change Are diatom communities in temporary rivers important for these lotic ecosystems as they are subjected to the effects of climate change Do diatoms in peatlands behave differently from their terrestrial and aquatic rivers lakes others counterparts Audience The book is intended primarily for professionals in the fields of diatom research algal research phycology organismal population and community ecology limnology microbiology organismal biology paleoecology and paleolimnology The book will also serve as a reference for graduate students seeking guidance on terminology techniques and current methods in diatom research

Tropical Pathology W. Doerr, G. Seifert, 2012-12-06 Since the first edition more than 10 years ago many new information material about tropical diseases have been collected New technologies were established e.g. hybridization techniques flow cytometry image analysis telepathology serologic analysis etc The continuous and rapid improvement of tourism in all countries of the world and the increasing emigration of peoples of the developing countries to the old continents have changed the classical image of tropical diseases which are seen with greater frequency in temperate and highly developed countries For these reasons new concepts were necessary for the second edition of the pathology of tropical diseases The 27 chapters are written by well reputed experts in these fields

Aflatoxins Lukman Abdulra'uf, 2022-02-09 Aflatoxins are a group of highly toxic and carcinogenic substances that occur naturally and can be found in food substances Aflatoxins are secondary metabolites of certain strains of fungi *Aspergillus flavus* and *Aspergillus parasiticus* as well as the less common *Aspergillus nomius* Aflatoxins B1 B2 G1 and G2 are the most important members which can be categorized into two groups according to chemical structure As a result of the adverse health effects of mycotoxins their levels have been strictly regulated especially in food and feed samples Therefore their accurate identification and determination remain a herculean task due to their presence in the complex food matrix The great public concern and the strict legislation incited the development of sensitive analytical methods that are discussed in this book

**Aquatic System and Remediation** Susmita Mukherjee,Sanket J. Joshi,Sonali Paul,Rita Kundu,2024-03-29 The eco friendly remediation technologies for the degraded environment are indeed the need of the hour Even though the regulatory mechanisms are in place to control the discharge of untreated contaminants into the natural environment still we could see a different picture hence remediation and restoration of the environment becomes an ardent requisite The present day fast pace of industrialization without proper disposal planning is impacting the water bodies adversely generating the need for green management technologies It is worth mentioning that these environment friendly technologies are most cost effective

as well The advancements in biotechnology have paved the way to mitigate the problem The primary audience of this book are the students and researchers who are working in the field of toxicology and bioremediation of aquatic environments We have primarily focused in this book on bioremediation of aquatic system toxicity considering this as an environment friendly system and having the least adverse effects Hence this book aims to bring forward together on a single platform the latest research in aquatic resource management which includes the discussions and discourses on the degradation and the effect and the remediation This book includes a discussion on the different sources of contamination from industries or by the usage of commercial pesticides or even fertilizers These contaminants if discharged in their toxic form as effluent cause harm to the aquatic systems and the subsoil and create the possibility of groundwater contamination This book includes a discussion on the different routes of contamination and the food chain transport possibilities of pesticide pollutants which are very contemporary and required topics of research It also includes relevant discussions on how to get rid of the toxicity

*Legacy, Pathogenic and Emerging Contaminants in the Environment* Manish Kumar, Meththika Vithanage, Sanjeeb Mohapatra, Kishor Acharya, 2021-12-30 This is the time when legacy pathogenic and emerging contaminants must be talked about understood and dealt with together While the geogenic contamination of the groundwater is a well established phenomenon that is considered as legacy contaminants that risk people's health globally both pathogenic and emerging contaminants like various water borne pathogens and pharmaceutical personal care products PPCPs are becoming imperative for their acute and chronic toxic effects While contaminated groundwater consumption leads to skin pigmentation hyperkeratosis kidney damage cardiovascular disease and children's overall development poor sanitation related pathogenic microorganisms cause a significant number of child and prenatal deaths Simultaneously antibiotic microbial resistance AMR is expected to kill 100 million people by 2050 However there are rare texts that combine aspects of all these three under a single book cover This book gives an understanding of the occurrence fate and transport of geogenic microbial and anthropogenic contaminants in the groundwater It covers not only the scientific and technical aspects but also environmental legal and policy aspects for contaminant management in the environment under the paradigm shift of COVID 19 This book is intended to bring the focus on the natural contaminants biotic or abiotic in the post COVID Anthropocene which is illustrating a significant alteration of systems and the subsequent downstream impacts owing to globalization This book has compiled global work on emergence mass flow partitioning and activation of geogenic emerging and pathogenic contaminants in various spheres of environment with special emphasis on soil sediment and aquatic systems for enhancing the understanding on their migration and evolution for the welfare of mankind
