With over 500 illustrations, this is the definitive volume on revision total hip arthroplasty.

**Global Joint Registry** Alicia M. Runser, 2020. Total hip arthroplasty (THA) has become well known as being one of the most successful procedures with much long-term positive clinical results. However, revision surgeries are still required. The four most common failure modes for THAs: reasons for revision are loosening, dislocation, or instability, fracture, and infection. The goal of a hip arthroplasty register is to gather information on patients that undergo a total hip arthroplasty and factors pertaining to their surgery which may affect their outcome for future years, such as the reason for revision. Analysis of this data can help with the allocation of healthcare funds and the efficacy of, on both the clinical and device side. The objective of this research was to compile the national registries for hip replacements into a global registry, comparing the data from different countries and statistically analyzing the reasons for revision. Global trends of revision surgeries were identified and projected. A total of 37 national joint registries were identified, of which 15 contained data on the failure modes. The results showed that the reason for revision had a significant effect on the percentage of revisions with loosening, leading to a significantly greater percentage of revisions than any other reason. For the countries with the most complete data, it was found that the country

did not have any significant effect on the percentage of revision. Additionally, when analyzing various countries over a 5-6 year period, it was found that the year did not significantly affect the percentage of revisions.

***Acetabular Revision Surgery in Major Bone Defects*** Eduardo García-Rey, Eduardo García-Cimbrelo, 2018-10-24

This book reviews the most important issues related to acetabular revision hip surgery and assesses the different management procedures that are currently used in light of the challenging major defects. Since the 1970s, there has been a continual rise in the annual number of total hip arthroplasty (THA) procedures, which has increased the demand for revision surgeries. Most revision operations of the hip are the result of acetabular problems, and early failures are usually related to acetabular bone defects in complex primary THAs. Long-term failures are mostly due to wear debris and osteolysis-related problems, and both types of complications are presented throughout the book. Surgeons with a special interest in hip reconstruction surgery will find this book to be an essential resource for successfully dealing with highly complex revision procedures.

***Femoral Revision Arthroplasty*** Bernd Fink, 2022-03-23

This practical book combines thorough literature review with extensive clinical experience to provide a clear overview of femoral revision arthroplasty, with the aim to present all available surgical techniques and critically discuss pros and cons and evidence-based recommendations for each of them. A wealth of figures and several videos complement the book and guide the reader through the management of potential pitfalls and complications during and after surgery. Particular emphasis is further put on the comparison of different approaches, stem types, and fixation techniques, assisting readers in identifying the best indication. Designed as a practically oriented tool, this book offers an excellent resource for all specialist hip surgeons and fellows wishing to gain insights into this complex and challenging surgical procedure.
