Environmental Organizations in Modern Germany William T. Markham, 2008-08-01

German environmental organizations have doggedly pursued environmental protection through difficult times hyperinflation and war National Socialist rule postwar devastation state socialism in the GDR and confrontation with the authorities during the 1970s and 1980s The author recounts the fascinating and sometimes dramatic story of these organizations from their origins at the end of the nineteenth century to the present not only describing how they reacted to powerful social movements including the homeland protection and socialist movements in the early years of the twentieth century the Nazi movement and the anti nuclear and new social movements of the 1970s and 1980s but also examining strategies for survival in periods like the current one when environmental concerns are not at the top of the national agenda Previous analyses of environmental organizations have almost invariably viewed them as parts of larger social structures that is as components of social movements as interest groups within a political system or as contributors to civil society This book by contrast starts from the premise that through the use of theories developed specifically to analyze the behavior of organizations and NGOs we can gain additional insight into why environmental organizations behave as they do

The Accelerating Transport Innovation Revolution George Giannopoulos, John F. Munro, 2019-04-17 The Accelerating Transport Innovation Revolution A Global Case Study based Assessment of Current Experience Cross sectorial Effects and Socioeconomic Transformations offers a comprehensive view of current state of the art and practices around the world to create innovation on a revolutionary scale and connect research to commercial exploitation of its results It offers a fascinating new model of the innovation process based on theories of biological ecosystems general systems theory and basins of attraction represented through space time graphs well known in mathematics Furthermore it considers through a number of dedicated chapters key issues and elements of innovation ecosystems such as Causal Factors and system constraints affecting the development and sustainability of innovation ecosystems Chapter 4 Review of innovation organization and governance in key countries and regions Chapter 5 the role of technological Spillovers Chapter 6 Collection and use of data for innovation monitoring and benchmarking Chapter 7 Intellectual Property protection between competing ecosystems Chapter 8 Economics of innovation Chapter 9 Public and private sector involvement in Transport innovation creation Chapter 10 the role of the individual entrepreneur innovator in energizing change Chapter 11 Finally in Chapter 12 there is a thorough summary of key findings This book uses a paradigmatic approach to augment the innovation ecosystem model of innovation that integrates beliefs and learning into the innovation ecosystems model It therefore includes ten case studies from the U S Europe and Asia detailing how innovation is created across continents and different ecosystems and what are the critical lessons to be learned It does this effectively at five different levels of analysis i.e. the individual innovator entrepreneur level the organization level government agency or company the regional ecosystem level the nation state level and the global systemic or international level Each level of analysis reveals unique features of the innovation landscape and the ten case studies allow the reader to assess when and where specific enablers are facilitating innovation especially on a revolutionary scale The need for the book came from the realization that despite the billions of dollars spent on various research programs over the past 20 years

especially in the public sector there have been few clear and tangible efforts directed at exploring how innovation production increasingly occurs and the critical factors necessary to sustain large scale revolutionary change as the future unfolds Thus a primary theme of the book is that understanding how research results translate into market innovation and implementation especially understanding the nature of revolutionary innovation is as important as the creation of innovations themselves While the focus of the book is on Transportation the concepts and recommendations presented apply to other fields too Formulates and presents a workable and comprehensive new model of innovation Defines and analyzes many concepts and notions related to innovation research and market implementation Examines the critical factors affecting innovation production and successful commercial implementation of research results Examines organizational models of coordination governance data collection process analysis and use of intellectual property tools Includes recent well researched and documented case studies of successful innovation ecosystems across the world mainly but not only in the Transport field

Ideology and Organization in Communist China Franz Schurmann, 2023-11-10 In 1949 a powerful political military movement led by the Chinese Communist party gained control of war ravaged China inheriting a disorganized administration and a society eroded by decades of revolution Within a short time China was so radically transformed politically economically and socially that it appeared to have cut all links with the past The instruments of that transformation were ideology and organization Today seventeen years later the ideology and the organizational network despite changes remain as powerful as they were in 1949 They still hold that vast country together politically and determine its economic and social development This book after a discussion of ideology in its first part attempts to answer the question how Chinese Communist organization functions and why it is so successful The second part analyzes the organization of Party and government emphasizing methods of command and administration The third part looks at industrial organization the problems of management and control especially the continuing struggle between the professionals and the politicians The fourth part investigates the Chinese Communist methods of organizing their cities and villages tracing the history of village organization from traditional times through the Yen'an period the land reform of the late 1940 s and the collectivization of the mid 1950 s to communization in 1958 Although organization has been constantly changing in China basic patterns are apparent The book analyzes the most characteristic pattern in all aspects of organization the conflict between two incompatible elements or in the Chinese Communist terms

contradictions The basic contradiction is that between professional expert and political red elements This contradiction dominates the two distinctive periods in the short history of Communist China the First Five Year Plan 1953 1957 and the so called Great Leap Forward 1958 1960 The book describes how the Chinese Communists attempted during the former period to emulate the Soviet organizational experience with stress on techniques and technology and during the latter period to use their own organizational methods to achieve economic progress The presentation of the contrast between these two models of organization sheds light on the significant differences between the Soviet Union and Communist China This title is part of UC Press s Voices Revived program which commemorates University of California Press s mission to seek out and cultivate the brightest minds and give them voice reach and impact Drawing on a backlist dating to 1893 Voices Revived makes high quality peer reviewed scholarship accessible once again using print on demand technology This title was originally published in 1966
