Subjective Well-being in Older Adults Elizabeth Macera, 2005 The purpose of this qualitative descriptive study was to discover how older adults explain their interpersonal relationships while relating their beliefs about successful aging The participants were drawn from the Alameda County Study a longitudinal investigation that began in 1965 designed to discover associations between social factors and health After the 1999 follow up survey a questionnaire on successful aging was distributed to participants age 65 or older Out of this cohort 51 volunteers were interviewed regarding their concept of what constitutes successful aging A research assistant conducted face to face interviews 60 to 90 minutes in length which were transcribed verbatim This project was a secondary analysis of 49 of these interviews Using N Vivo qualitative software the interviews were coded and themes identified All but five participants had children The participants spoke of family relationships as very important to their well being The themes identified include freedom from family responsibilities re negotiating relationships with children and re connecting with spouse Social comparison was identified as a major mechanism for defining oneself as an older person In addition gender differences were identified A major task for women was balancing work with their family relationships Men focused more on their relationships with children and spouses after they retired than they did while working Overall family relationships remain an important focus for older adults Clinical and research implications include assisting elders to maintain their roles in the family and recognizing the importance of social comparison in self definition
